# 1 Introduction

## 1.1 The Current MCIL Charging Schedule

1.1.1 As part of the funding arrangements with Government for the Crossrail project, the GLA and TfL committed to raise £600 million from general property development in London by March 2019. TfL and the GLA are well on track to meet this commitment from the Mayoral Community Infrastructure Levy (Mayoral CIL or MCIL) and the Crossrail Section 106 (S106). MCIL is a charge on new development above 100 square metres (sq m) and the charge is set out in a Charging Schedule supported by Supplemental Planning Guidance. More details can be found in the "Use of Planning Obligations in the Funding of Crossrail, and the Mayoral Community Infrastructure Levy" updated in March 2016.

1.1.2 Before the introduction of MCIL, JLL, acting as viability consultants to TfL and the GLA, assisted in preparing viability evidence to support the proposed rates and to ensure that the levy did not make development across the capital unviable by placing an undue financial burden on developers. The viability evidence and the draft charging schedules went through the Examination in Public (EiP) in November / December 2011.

1.1.3 Mayoral CIL came into force on 1 April 2012 and has raised circa £342 million to Q3 2016-17. The rates vary by London borough, broadly reflecting the average house prices across three charging **groupsbands**. The rates, excluding indexation are as follows:

- **Band 1 (£50 per sq m)** – Camden, City of London, City of Westminster, Hammersmith and Fulham, Islington, Kensington and Chelsea, Richmond-upon-Thames, Wandsworth
- **Band 2 (£35 per sq m)** – Barnet, Brent, Bromley, Ealing, Greenwich, Hackney, Haringey, Harrow, Hillingdon, Hounslow, Kingston upon Thames, Lambeth, Lewisham, Merton, Redbridge, Southwark, Tower Hamlets
- **Band 3 (£20 per sq m)** – Barking and Dagenham, Bexley, Croydon, Enfield, Havering, Newham, Sutton, Waltham Forest

When using the term "borough" for convenience we include the City of London. Since the Charging Schedule was adopted two Mayoral Development Corporations have been formed; the OPDC and LLDC. These are collection authorities for CIL purposes and charge CIL at the rates referred to above according to the geography of the underlying borough.

1.1.4 The MCIL charging **groupsbands** have been coloured red, blue and green for ease of analysis and comparison. Table 1 below provides a breakdown of MCIL receipts by borough up to December 2016.

Table 1: MCIL receipts by Borough/borough to Q3 2016-17

Borough/Authorities	Total MCIL revenue to Q3 2016-17 (including indexation)
Tower Hamlets	£38,241,100
City of Westminster	£31,177,930
Hammersmith and Fulham	£23,484,321
Southwark	£22,777,993
Wandsworth	£20,635,614
Lambeth	£20,582,965
City of London	£16,023,554
Hackney	£14,567,975
Camden	£13,785,895
Greenwich	£13,485,246
Islington	£13,139,156
Barnet	£12,677,179
Hounslow	£11,222,719
Brent	£10,646,789
Hillingdon	£8,859,294
LLDC	£8,771,795
Kensington and Chelsea	£6,312,413
Haringey	£5,538,333
Bromley	£5,322,620
Lewisham	£5,272,960
Ealing	£4,402,867
Newham	£4,217,633
Harrow	£3,613,860
Merton	£3,558,492
Enfield	£3,385,660
Kingston upon Thames	£3,274,393
Bexley	£2,914,328
Richmond upon Thames	£2,900,316
Croydon	£2,870,503
Waltham Forest	£2,387,147
Sutton	£2,283,702
Barking and Dagenham	£1,206,532
Redbridge	£1,076,479
Havering	£940,107
OPDC	£179,367
<b>Total</b>	<b>£341,737,237</b>

Note: The London boroughs and LLDC started collecting in [ ] and OPDC started collecting in [ ]. Other boroughs/authorities started collecting MCIL on behalf of the Mayor in April 2012.

Commented [RWJ1]: Neil L do you have these dates?

1.1.5 ~~LLDC BCIL came into effect on 6<sup>th</sup>. OPDC devolved the collection of MCIL to its underlying boroughs upon its creation in April 2015. OPDC has not yet started charging PDOS consultation ran October/November 2016.~~

Formatted: JLL\_Heading Three

1.1.6 It can be seen that those boroughs which have seen the most development tend to be those where the CIL level is in ~~Bands~~ bands 1 & 2 i.e. the highest and middle levels.

1.1.7 The Crossrail S106 charge was introduced in April 2010. Crossrail S106 is charged on commercial development in the Central ~~London Crossrail S106 contribution area. The S106 contribution area is a modified version of the Central Activities Zone (CAZ), the~~ and an area covering North Docklands ~~and within a on the Isle of Dogs as well as 1km radius of zones around all other~~ Greater London Crossrail stations. Since inception, ~~the total~~ Crossrail ~~S106, total~~ S106 contributions have reached £96m drawn from around 150 different developments with, ~~we are instructed,~~ no significant issues needing to be addressed in respect of viability implications.

1.1.8 The Crossrail Funding S106 policy mitigates the transport impacts of development and runs until early 2019 by which time the Crossrail service is expected to be operational. It is currently anticipated that TfL's target of raising £600 million for Crossrail through both the S106 policy and MCIL will be met during the financial year 2018/19. It is proposed to transition from the current Crossrail S106 ~~in tandem with MCIL1 and MCIL 1~~ arrangements, to only having ~~a MCIL-2~~, from 1 April 2019.

1.1.9 Following the implementation of MCIL in April 2012, the GLA and TfL, supported by JLL, have undertaken two Biennial Reviews of, one in 2014 and another in 2016 to ensure that the rates set continue to be appropriate.

1.1.10 Regulation 59(2) as amended by the Community Infrastructure Levy (Amendment) Regulations 2012 states that CIL applied by the Mayor to funding infrastructure must be applied to funding the provision, improvement, replacement, operation or maintenance of roads or other transport facilities, including, in particular, funding for the purposes of, or in connection with, scheduled works within the meaning of Schedule 1 to the Crossrail Act 2008.

1.1.11 Regulation 14(1) as amended states that 'in setting rates (including differential rates) in a charging schedule, a charging authority must strike an appropriate balance between (a) the desirability of funding from CIL (in whole or in part) the actual and expected estimated total cost of infrastructure required to support the development of its area, taking into account other actual and expected sources of funding; and (b) the potential effects (taken as a whole) of the imposition of CIL on the economic viability of development across its area.'

1.1.12 Policy 6.1 of the London Plan 2016 makes it clear that transport infrastructure is central to the achievement of the wider objectives set out in paragraph 1.53 of the ~~plan~~ Plan. Paragraph 6.2 ~~plan of the Plan~~ states 'The Mayor recognises that transport plays a fundamental role in addressing the whole range of his spatial planning, environmental, economic and social policy priorities. It is critical to the efficient functioning and quality of life of London and its inhabitants. It also has major effects – positive and negative – on places, especially around interchanges and in town centres and on the environment, both within the city itself and more widely. Conversely, poor or reduced accessibility can be a major constraint on the success and quality of places, and their neighbourhoods and communities. He is particularly committed to improving the environment by encouraging more sustainable means of transport, through a cycling revolution, improving conditions for walking, and enhancement of public transport.'

1.1.13 Post 2019, when Crossrail construction is expected to complete, the GLA and TfL intend to continue collecting MCIL, (referred to as MCIL 2 for the purposes of this evidence) in order to assist in financing Crossrail 2 or for the funding the improvement, replacement, operation or maintenance of roads or other

transport facilities across the capital including the projects set out in table 6.1 of the London Plan 2016. See **Appendix A for a copy of table 6.1 of the London Plan.**

Formatted: Not Highlight

**4.1.431.1.14** Crossrail 2 is widely supported. In their report titled '*Funding Crossrail 2*' (February 2014) London First describe Crossrail 2 as '*essential to support London's future growth and competitiveness as it becomes a city of 10 million people in the 2030s. Without Crossrail 2, the projected population and jobs growth will put intolerable pressure on the capital's transport network from the 2020s onwards. This is not just a quality of life point for Londoners: such an outcome would undermine London's productivity and growth in its contribution to both the wider UK economy.*'-(p.9). The report further goes on to describe developer contributions by way of Community Infrastructure Levy and ~~the~~ Crossrail Section 106 as being possible sources of funding ~~as per Crossrail, and, in addition,~~ the intensification of development along the new Crossrail 2 route ~~providingis forecast to provide further economic benefit of the scheme.~~

Formatted: Font: Italic

Formatted: Font: Not Italic

**4.1.441.1.15** The National Infrastructure Commission report '*Transport for a World City*', published in March 2016, states that: "*The Commission's central finding, subject to the recommendations made in this report, is that Crossrail 2 should be taken forward as a priority. Funding should be made available now to develop the scheme fully with the aim of submitting a hybrid bill by autumn 2019. This would enable Crossrail 2 to open in 2033*".<sup>1</sup>

Formatted: Font: Not Italic

**4.1.451.1.16** GLA and TfL have instructed JLL to provide background viability evidence in support of MCIL 2 and to consider proposed changes to the Charging Schedule in light of the "Balance Test" in Regulation 14 and other London Plan priorities.

## 1.2 Considerations when revising the Mayor's Charging Schedule

In setting the context for the proposed revisions to the Mayor's Charging Schedule it is instructive to consider the report by Examiner Keith Holland DipTP, MRTPI, MRICS issued on 22nd January 2012 in connection with MCIL.

1.2.1 Mr Holland noted at the outset that because "*the London situation is unique in so far as there is provision for both the Mayor and the ~~Boroughs~~ boroughs to impose a Community Infrastructure Levy.*"

Formatted: Font: Italic

Formatted: Font: Italic

1.2.2 He grouped his responses following the Examination in Public under three headings:

1. The approach adopted by the Mayor,
2. Viability Issues, and
3. The Exceptions Policy.

1.2.3 Mr Holland accepted that undertaking viability analysis across the entire geography of Greater London presented a unique set of challenges as did the circumstances where MCIL would be levied in tandem with BCIL. He considered the basis of undertaking a viability study using residential house prices as a proxy for viability and he accepted the logic that starting with residential, given the quantum of residential development as a proportion of development as a whole, was appropriate. He said "*the approach adopted by the Mayor is logical and reasonable*". He also considered the correlation with evidence of retail and office rents and found

<sup>1</sup> See: '*Transport for a world city*,' National Infrastructure Commission (March 2016). Retrieved from [https://www.gov.uk/government/uploads/system/uploads/attachment\\_data/file/506633/Transport\\_for\\_a\\_world\\_city\\_-\\_100316.pdf](https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/506633/Transport_for_a_world_city_-_100316.pdf) last accessed 20/03/2017

Formatted: Font: Times New Roman, 10 pt, Not Italic

that a correlation was sufficiently strong to make the residential value approach suitable for adoption generally across other uses. (Para 12)

1.2.4 In considering residential values, the Mayor had put forward evidence based on average house prices and the basis for this (mean vs median) was considered to see if there was another way in which house prices might be judged. Mr Holland concluded *"there is no strong justification on viability grounds for recommending a change in approach."* (Para 22)

1.2.5 When considering what levels of MCIL might be appropriate the balance test set out in the regulations was referenced. In Paragraph 23 Mr Holland states *"the rate must be based on viability considerations balanced against the part that infrastructure proposed will play in the development of the area. The Mayor takes the legitimate view that although the benefit will not be spread evenly throughout London, Crossrail will be of strategic benefit for the whole of London and that all Boroughs will benefit to some extent."*

1.2.6 In Paragraph 42 Mr Holland considers arguments for reducing or setting a nil MCIL in Opportunity Areas. In Paragraph 43 he summarises his thoughts in the following way; *"the justification for excluding areas from the Mayor's Crossrail S106 arrangements does not apply when looking at a strategic London wide infrastructure project. I also accept the GLA point that to give the OA the advantage of a low or nil MCIL rate on the grounds of promoting desirable development would run the risk of contravening the State Aid rules."*

1.2.7 In concluding on viability matters the Examiner says *"None of the representations were able to convincingly counter the argument advanced by the Mayor that the general impact of this charge would be very modest - in the order of 1% of the value of completed residential units. One percent is within the margin of error for most valuations and cannot be said to generally represent an intolerable burden. On the contrary the evidence presented to the examination strongly points to the MCIL usually being a relatively unimportant factor in relation to viability. Obviously some marginal schemes might be at risk but that is not the test for the acceptability of the level of the charge"*.

1.2.8 In the following sections of his report Mr Holland ~~then~~ considers the ~~Mayor's decision not to make use of the exceptional circumstances relief and the Mayor's decision not to offer this.~~ Having reviewed the legislation the Examiner concluded that *"I am therefore not in a position to make a recommendation that will require the Mayor to change his present stance that relief for exceptional circumstances will not be made available."*

1.2.9 Paragraph 55 sets out the conclusion of the examination and what follows is that paragraph in full *"The Mayor has justified the need to raise a MCIL to help to pay for a strategic transport facility for London. In order to assess the implication for the proposed charge for the viability of development in London as a whole the Mayor has adopted an approach which links viability with 2010 house prices. The reasonable assumption has been made that the higher value areas are likely to be the most robust in terms of development viability. A three band charging schedule is justified on the basis of Borough house prices. Given the extreme complexity of London and the SG [Statutory Guidance] about the nature of evidence required to justify charging schedules, the Mayor has sensibly adopted a very basic but fundamentally sound approach. The available evidence is that the charge proposed by the Mayor would represent a very small part of the cost of development and hence would not seriously threaten the economic viability of development across London."*

### 1.3 Market background for testing MCIL 2 viability

1.3.1 Any study of viability must be considered against the wider health of the economy and property markets. As we enter into 2017 initial estimates are that GDP was 2.4% higher in 2016 than the year before. This is higher than many commentators expected post the Brexit vote. JLL's in-house view is that this level is likely to moderate a

little in 2017 partly due to the take up in employment being hard to repeat due to a reduced available labour pool.

1.3.2 Inflation has risen to 1.6% per annum from close to zero with much of the rise attributed to the exchange rate effect that followed the pound depreciating against the dollar after the Brexit vote. Interest rates are rising in the USA and it is likely that UK will follow this trend.

1.3.3 Turning to the London property markets:

- **Retail** – There has been no let-up in occupier and investor appetite for Central London retail locations. The British Retail Consortium (BRC) reports a year on year increase in footfall for the 3 weeks before Christmas with much of this attributed to an increase in overseas visitors. Looking to the future for business rates re-evaluation which is effective from April 2017 is likely to have a negative effect on Central London locations and the opening of Crossrail will be positive. Need a couple of sentences about retail elsewhere in London. Outside of Central London the health of the retail market varies on a location by location basis, and is dependent on local market characteristics and competition. Big box retail particularly food stores has been relatively subdued as retailers adjust to changes in consumer preferences.
- **Offices** – The market was patchy during 2016 but finished relatively strongly. In the City and Docklands/East London there was take up of 6.5 million sq ft and there is 5.6 million sq ft under construction in the City (50% to finish this year and of the remainder approximately 50% is represented by 1 building – 22 Bishopsgate which is due to be delivered in 2019). Active demand is line with the 10 year average in the West End take up last year amounted to 3.6 million sq ft (ahead of the 10 year average) and active demand is in the order of 3.8 million sq ft with just 2 million sq ft under development.
- **Industrial** – Vacancy rates remain low, and there is no sign of this easing in the foreseeable future. 2017 will see continuing pressure on industrial land linked to growing housing need. London has been losing its industrial land and as a result we are seeing more interest in the intensification of industrial development. 2017 could see the first proposal for a multi-storey ramped warehouse development for 10 years. There will also be greater demand for local delivery centres and parcel centres in urban areas, driven by online retail and same-day delivery services.
- **Residential** – Legislative changes, such as those relating to stamp duty, and the uncertainty around Brexit have led to weaker investment demand from overseas as well as from the domestic investment and owner-occupier buyers. In 2017 it is expected that build costs will increase due to the effect of the devalued pound sterling on imports ~~and~~. In addition, the Mayor has continued to push for bigger ~~higher~~ affordable housing contributions. As a result of these factors, in contrast with the nearly 24,000 homes built in London during 2015, 2017 housing supply levels are expected to fall back closer to 16,000. In terms of pricing, Prime Central London is expected to be flat in 2017 with very little house price growth ~~is~~ expected across Greater London over the year as the market absorbs the effect of Brexit uncertainty as well as the knock-on impacts of higher consumer price inflation.

1.3.4 Overall supply remains tight and most markets show momentum despite political uncertainty.

1.3.5 Over the longer term we expect the cyclical nature of the property market to continue. However the underlying pressure of predicted population growth in London and limited land supply should lead to further value growth provided the underlying economy is healthy.

## 2 Our approach to MCIL 2

### 2.1 General approach to viability testing for MCIL 2

2.1.1 A top down approach to viability testing is preferred for a London-wide viability assessment.

2.1.2 In considering the extant CIL rates Mr Holland stated "Overall in London the MCIL would result in an average charge equivalent to 0.87% of the value of a house with a range around this mean from 0.48% to 1.13%. The 3 bands result in most boroughs ending up with a charge that is relatively close to the average of 0.87%. Hence the 3 bands represent a reasonable balance between complexity and fairness." (Para 19)

2.1.3 We believe this remains a good test to assess a proposed change to the levels ~~effor~~ MCIL 2. In addition we will take into account:

- changes in values across London since MCIL was introduced and whether the allocation of boroughs to the red, blue and green charging bands continues to be appropriate
- the growth in building costs and values since MCIL was introduced and whether there is any viability headroom to justify an increase in rates for MCIL 2
- the impact of ~~Boroughborough~~ CILs on MCIL 2 viability
- the impact of affordable housing policy

2.1.4 ~~In the report titled 'New Approach to Developer Contributions'~~ published by the CIL Review Team (October 2016) and chaired by Liz Peace, ~~highlights~~ complexity ~~is highlighted~~ as one of the concerns about the way CIL is being implemented-, see in particular section 3.8 of the report.<sup>2</sup>

The CIL Review Team reported that consultees found the system inflexible. However they made an exception for MCIL. Paragraph 3.3.5 says 'The only exception seems to be the single rate Mayoral CIL imposed by the Mayor of London covering all development and set at a relatively low level to contribute to the funding for a specific piece of infrastructure, namely Crossrail. Despite some early complaints, this seemed to end up being broadly acceptable to all and indeed was frequently cited as a success story.' Further, at paragraph 3.4.7 the CIL Review Team goes on to state '...the London Mayoral CIL which provides an interesting example of how a relatively low level and simple levy applied across a wider economic area has been able to provide a contribution towards the funding for one large identified piece of infrastructure. It could well be argued that this is closer to how CIL was meant to operate in its simplicity, universal applicability and use than most of the CILs that have been introduced elsewhere.'<sup>3</sup>

2.1.5 In light of the above, the Mayor proposes retaining a borough wide flat rate with a zero rate for development used wholly or mainly for the provision of any medical or health services except the use of premises attached to the residence of the consultant or practitioner and for development used wholly or mainly for the provision of education as a school or college under the Education Acts or as an institution of higher education.

2.1.6 However commercial uses ~~within, covered by the CAZ and North Docklands Crossrail S106 policy,~~ have their own distinctive viability characteristics and ~~developers are already accustomed to paying the Crossrail S106 which the contributions. The~~ Mayor proposes to roll ~~these~~ in to the MCIL 2 ~~rates within the CAZ and North~~

<sup>2</sup> See: 'A New Approach to Developer Contributions,' CIL Review Team (October 2016). Retrieved from [https://www.gov.uk/government/uploads/system/uploads/attachment\\_data/file/589637/CIL\\_REPORT\\_2016.pdf](https://www.gov.uk/government/uploads/system/uploads/attachment_data/file/589637/CIL_REPORT_2016.pdf) last accessed 17/03/2017.  
<sup>3</sup> *Ibid*

~~Docklands areas charging regime.~~ At present because of the way the Mayor allows ~~CIL~~MCIL payments in ~~CAZ~~ and ~~North Docklands~~~~the Crossrail S106 contribution areas in central London and the Isle of Dogs~~ to be set off against Crossrail S106 liabilities, the S106 is effectively a 'top-up' above the prevailing ~~CIL~~MCIL rates. This policy has been running since 2010 and so the overall quantum of payment is well understood and has been absorbed into the development economics in central London.

- 2.1.7 In considering commercial rates we will review the S106 charging area (including 1km zones around stations) and will make proposals to amend or simplify it to reflect current viability characteristics.

### 3 Residential and commercial values

#### 3.1 Residential and commercial development activity

- 3.1.1 In order to estimate the quantum of development activity and the split between residential and commercial uses we have drawn upon a number of data sources.
- 3.1.2 The most reliable data source is the net additional CIL paying floor space since this information is based on MCIL receipts at known rates per sq m across the ~~Boroughs~~boroughs. However, analysis of this data is ~~difficult~~  
~~due to the need to make assumptions that have to be made around account for~~ indexation and instalment provisions.
- 3.1.3 Analysis of MCIL receipts for the full year 2015-16 shows there has been in the order of 2.95 million sq m of net additional gross internal floor area. Data provided by the GLA based on planning applications shows that on average new development shows a circa ~~50~~100% increase in density on site. This evidence suggests that total development in 2015-16 amounted to circa 5.9 million sq m.
- 3.1.4 Since collecting authorities do not report a breakdown of floor space by use, we have had to make estimates as to how floor area is split between uses drawing on various sources of information including the GLA (housing), CoStar (retail), AM:PM (hotels) and JLL (offices and other uses).
- 3.1.5 We recognise that there is likely to be inaccuracy in our calculations, however, the purpose of calculating the numbers in Figure 1 is not to provide precise data for analysis, but rather to gauge the orders of magnitude in terms of proportion of residential to commercial development.
- 3.1.6 ~~Total development – CIL receipts~~ We set out in Figure 1 below our ~~analysis~~estimate of the split between residential and commercial development activity.

**Figure 1: Residential and commercial development activity estimates based on MCIL receipts data for FY 2015-16 (estimated)**

	Gross Internal Area	
Net additional CIL paying floor space (2015-16 receipts)	2,950,000	sq m
100% net increase (based on GLA data) say	5,900,000	sq m
Less:		
Offices <del>607,000 sq m N/A</del>	-809,333	sq m
Retail/Hotels	-404,667	sq m
Other uses say	-200,000	sq m
Total Gross residential floor space	4,486,000	sq m
Net increase in residential floor space say	2,243,000	sq m
Net increase in gross residential floor space incl. affordable housing at 15%	2,638,824	sq m
Net additional Homes (incl. affordable) GLA data (2015) rounded	29,737	homes
Area of each net additional home say	88.74	sq m
<b>Make up of 2.95m sq m net additional area</b>		
Residential CIL paying floor space	2,243,000	sq m

Formatted Table

Formatted: Font: 10 pt

Commercial CIL paying floor space	707,000	sq m
Total	2,950,000	sq m

Source: TfL, GLA, JLL

3.1.7 This analysis suggests that circa 24% of all development in 2015-16 was commercial compared with 76% being residential. We conclude that residential remains the dominant development type in London and therefore continues to be ~~the an appropriate~~ starting ~~basepoint~~ for our analysis in setting borough by borough MCIL 2 rates.

### 3.2 Mean vs Median

3.2.1 In the MCIL examination arguments were made for and against basing the analysis of house prices on average (mean) prices or using median house price data. The Examiner noted there was little difference whichever approach was taken.

3.2.2 Table 2, below, shows changes in average and median house price growth since the viability evidence for the original MCIL was prepared in 2010 to 2016. The Land Registry has since rebased their data since 2010 and so we show this in Table 2 for purposes of comparison.

Table 2: Average and median house price changes by MCIL charging ~~groupsbands~~

Borough	Average House Price (as per HPI data April 2010)	Borough	Average House Price (rebased HPI data April 2010)	Borough	Median House Price (as per ONS data Q1 2010)	Borough	Average House Price (as per HPI data November 2016)	Borough	Median House Price (as per ONS data Q2 2016)
Kensington and Chelsea	£866,295	Kensington and Chelsea	£818,816	Kensington and Chelsea	£700,000	Kensington and Chelsea	£1,303,778	Kensington and Chelsea	£1,200,000
City of Westminster	£623,963	City of Westminster	£590,583	City of Westminster	£525,000	City of Westminster	£1,021,027	City of Westminster	£950,000
Camden	£553,706	Camden	£499,767	Camden	£425,000	Camden	£872,390	City of London	£797,250
Hammersmith and Fulham	£494,064	Hammersmith and Fulham	£488,087	Hammersmith and Fulham	£425,000	City of London	£790,439	Camden	£750,000

3.2.3 We conclude from this analysis that average house prices remain closely aligned to median price levels and so we continue to use average house prices for present purposes.

### 3.3 Proposed MCIL 2 charging bands

3.3.1 Based on Table 2 (~~Average~~average price changes by MCIL charging ~~groups~~bands) the Mayor proposes the following changes for MCIL 2 bands. In the case of two Mayoral Development Corporation we have considered the rates being proposed for the underlying boroughs and have proposed a unitary rate for each Authority based on our assessment of the characteristics of the part of the borough or boroughs in which it is located.

- **Band 1** – Camden, City of London, City of Westminster, Hammersmith and Fulham, Islington, Kensington and Chelsea, Richmond-upon-Thames, Wandsworth (**no change**)
- **Band 2** – Barnet, Brent, Bromley, Ealing, Enfield Hackney, Haringey, Harrow, Hillingdon, Hounslow, Kingston upon Thames, Lambeth, Lewisham, ~~LLDC~~, Merton, ~~OPDC~~, Redbridge, Southwark, Tower Hamlets, Waltham Forest (**change: Waltham Forest, Enfield, ~~LLDC~~ and ~~LLDC & OPDC~~ join the ~~groupband~~ and Greenwich leaves the ~~groupband~~**)
- **Band 3** – Barking and Dagenham, Bexley, Croydon, Greenwich, Havering, Newham, Sutton (**change: Waltham Forest and Enfield leave the ~~groupband~~ and Greenwich ~~join~~joins the ~~groupband~~**)

### 3.4 Are residential values a good lead indicator for high values in other sectors?

3.4.1 In order to establish a workable cross-London proxy for viability we have taken the likely major component of development (residential) and looked at the correlation between ~~this~~residential values and other uses.

#### 3.4.2 Offices

3.4.3 We have looked at the correlation between residential prices and office rents (where available – see Figure 2 and Table 4). As can be seen, there is a reasonably strong correlation between office rents and house prices.

DRAFT

Figure 2: Correlation between house prices and office rents (London Boroughs)

Source: Land Registry, CoStar, JLL

### 3.4.4 Retail

3.4.5 Because of the very specific locational characteristics of retail it is more difficult to provide retail evidence on a Borough by Borough basis with any degree of accuracy. However, observation of letting data confirms that the highest values are found in central London locations such as Kensington and Westminster and the City. There are outlying covered shopping centres in the LLDC (Westfield, Stratford), Hammersmith & Fulham (Westfield London) and Barnet (Brent Cross) for example, that have generally higher rents than boroughs with similar average house prices but without the covered shopping centre provision. There are also significant retail town centres in Richmond, Kingston, Croydon, Bromley, Ealing, Wood Green, Harrow,

Formatted: Line spacing: Exactly 14 pt

Formatted: Not Highlight

Formatted: Not Highlight

Formatted: Not Highlight

Formatted: Not Highlight

Formatted: Not Highlight

Formatted: Not Highlight

Romford, Uxbridge, Hounslow, Stratford, Ilford and Sutton. The exceptions are the Westfield centre in Stratford and Croydon higher values are typically found in the boroughs in the Red and Blue MCIL charging bands, for instance, that also have higher retail rents than boroughs with similar average house prices but that lack a focussed retail provision. Nevertheless, with one or two exceptions, boroughs with significant retail provision tend to be in the proposed middle and highest value MCIL bands.

Formatted: Not Highlight

#### 3.4.6 Other categories

3.4.7 'Other categories' include buildings such as those used for leisure and transport e.g. football stadia and airport terminal buildings.

3.4.8 High house prices correlate with high disposal income and therefore, all other things being equal, the likely buying power for commercial activities and therefore the likely demand for this type of floor space in a Boroughborough.

3.4.9 We have confirmed this by comparing house values with disposable income per person of working population in Figure 3 and Table 4 below.

Formatted: Not Highlight

Formatted: Not Highlight

Figure 3: Correlation between house prices and disposable income (London Boroughs)

Source: Land Registry, Oxford Economics

- 3.4.10 There is no straightforward way of dealing with viability of non-commercial activities. Some will be charities occupying for charitable purposes. The remainder will be mainly public and local government where viability will be a combination of political desire and cost/benefit analysis.
- 3.4.11 For current purposes we continue to assume that viability of non-commercial uses will match viability for commercial uses except in the case of the health and education sectors where the pressures on constrained public resources and their likely effect on viability decisions by the relevant authorities have led the Mayor to be minded to continue to set nil rates for these uses. Had we not made this assumption we conclude that it would

be difficult to provide a conclusive view about the effects on economic viability when the rationale for development is not based on economic factors.

### 3.5 Conclusion

3.5.1 Residential values are still a good proxy for viability characteristics of non-residential uses.

3.5.2 The average house price per Borough (mean) is still appropriate for assessing viability characteristics.

## 4 Do viability characteristics suggest that a rise in core CIL rates could be accommodated?

4.1.1 As a start to answering this question we first look at the impact of MCIL on development activity since its introduction.

Figure 4: Office and private residential starts on site

\*GLA completion data used to avoid double counting in start on site data when multiple and duplicate consents are implemented. Source: JLL, GLA, Molior, DCLG

- 4.1.2 Development has not been hampered since the introduction of MCIL in 2012-; with office and residential trending upwards.
- 4.1.3 Whether the gap between value and cost has widened since the evidence used to support the introduction of MCIL will be an important indicator of the likelihood of the ability for higher MCIL 2 rates to be absorbed within development appraisals. BCIS and G&T report tender price growth but their conclusions are markedly different.

- 4.1.4 Whether using BCIS or G&T data the conclusion we draw is that house price inflation has exceeded building cost inflation by a very considerable degree. We have established earlier that there is a reasonable correlation between commercial and residential values. However to be sure that commercial values have outgrown building costs we have looked at this relationship.

Figure 5: Value and price growth compared with build cost inflation

Source: MSCI/IPD, Land Registry, BCIS, G&T, JLL

#### 4.1.5 Central London retail, office and hotel values have grown at an even greater rate than residential.

## 5 MCIL and BCIL

### 5.1 Borough CILs

5.1.1 In the previous chapter we concluded that the gap between cost and value has grown considerably since 2010. This applies to both residential and commercial uses. However during the same period many boroughs have adopted their own charging schedules so in this chapter we consider the impact of this additional imposition.

5.1.2 We have reviewed the residential Borough CIL rates and have looked at the relationship between the 2016 average house price and CIL rates.

Table 5: Average house price and residential BCIL rates

Borough	Average House Price November 2016	Low Residential BCIL £ per sq m	High Residential BCIL £ per sq m	Mid-point Residential BCIL £ per sq m

5.1.3 Boroughs have, as predicted when the MCIL evidence was scrutinised, built into their charging schedules rates more targeted to their local geography. Wandsworth for example have adopted a residential rate of £574 per sq m in the 'Nine Elms Residential Area A' reflecting high residential values along the Thames, £265 per sq m in 'Nine Elms Residential Area B' in the part of the Vauxhall/Nine Elms area which is set back from the river, with £250 per sq m across the rest of the borough with the exception of the 'Roehampton Charging Area' which is set at zero, reflecting varying development viability characteristics in different parts of the borough.

5.1.4 However as might be anticipated the general trend is that BCIL rates rise as house prices increase. See figure 6 above.

5.1.5 We next consider whether the imposition of MCIL development activity has impacted development volumes. In order to calculate approximate levels of additional floor space we have removed indexation from the CIL receipts shown earlier in Table 1. By examining the data in Table ~~(5)~~6 below it can be seen that the green boroughs paying the lowest MCIL per sq m, are substantially in the bottom third of a list of boroughs/authorities. In order to calculate approximate levels of additional floor space we have removed indexation from the CIL receipts shown earlier in Table 1.

~~5.1.6 However also found in the bottom third is a borough with high house prices and a number in the middle band. As BCIL rates rise in line with house prices (the basis that was used for MCIL) it is reasonable to conclude that there would be no correlation between development and MCIL/BCIL in combination.~~

5.1.6 For the green boroughs, relatively low levels of MCIL has not led to greater development activity, leading to the conclusion that other factors are having a greater viability influence on viability than the prevailing MCIL charging rates.

**Table 6: MCIL receipts (~~excluding~~excl. indexation) by revenues and net additional GIA in sq m to Q3 2016-17**

Borough	Total MCIL revenue excluding indexation to Q3 2016-17	MCIL rate per sq m (excluding indexation)	Net additional development (GIA sq m) to Q3 2016-17
Tower Hamlets	£33,226,940	£35	949,341
City of Westminster	£27,853,421	£50	557,068
Hammersmith and Fulham	£20,516,892	£50	410,338
Southwark	£20,134,067	£35	575,259
Wandsworth	£18,308,958	£50	366,179
Lambeth	£18,463,412	£35	527,526
City of London	£14,506,765	£50	290,135
Hackney	£12,847,714	£35	367,078
Camden	£12,476,615	£50	249,532
Greenwich	£12,015,455	£35	343,299
Islington	£11,729,324	£50	234,586
Barnet	£11,391,709	£35	325,477
Hounslow	£10,046,845	£35	287,053
Brent	£9,547,160	£35	272,776
Hillingdon	£7,680,248	£35	219,436
LLDC	£7,639,096	£35/£20	218,260*
Kensington and Chelsea	£5,588,604	£50	111,772
Haringey	£4,787,390	£35	136,783
Bromley	£4,743,828	£35	135,538
Lewisham	£4,587,054	£35	131,059
Ealing	£3,995,995,905	£35	114,169
Newham	£3,780,260	£20	189,013
Harrow	£3,136,808	£35	89,623
Merton	£3,184,001	£35	90,971
Enfield	£3,037,537	£20	151,877
Kingston upon Thames	£2,859,849	£35	81,710
Bexley	£2,619,413	£20	130,971
Richmond upon Thames	£2,523,974	£50	50,479
Croydon	£2,533,527	£20	126,676
Waltham Forest	£2,143,309	£20	107,165
Sutton	£1,994,814	£20	99,741
Barking and Dagenham	£1,078,069	£20	53,903
Redbridge	£974,009	£35	27,829
Havering	£832,889	£20	41,644
OPDC	£149,473	£35/£50	4,271*
<b>Totals</b>	<b>£302,935,337</b>		<b>8,068,538</b>

\*For the purposes of this calculation we have assumed an MCIL rate of £35 per sq m for LLDC and OPDC. The area may be slightly overstated/understated as a result.

Formatted Table

- 5.1.7 Finally for completeness we look at when BCIL charging schedules were introduced. The majority came into effect in the years 2014 and 2015 based on evidence that pre-dated their introduction. ~~The marked~~Marked increases in value over cost occurred in 2015 and 2016 (see Figure 5, above). It is likely that viability characteristics will have improved since the evidence for most BCIL charging schedules was compiled.

Figure 7: Borough CIL Implementation by Year

Data includes LLDC and OPDC

Table 7: Borough CIL Implementation by Year

Year	Total Boroughs/Authorities
2012	2
2013	4
2014	10
2015	12
2016	3
None*	4

\*Bromley, Havering, Ealing and OPDC have not commenced charging- (PDCS consultation ran October/November 2016).

DRAFT

## 6 Flat or variable rates

- 6.1.1 There is a trade-off between not importing unfairness into the MCIL charging schedule whilst still keeping the regime simple to understand and to operate.
- 6.1.2 When the MCIL schedule was introduced the Mayor adopted low flat rates across all uses allowing boroughs to reflect specific viability issues within their boroughs by reflecting varied rates with their borough charging schedules. For commercial uses in Central London and North Docklands there was the additional consideration of the S106 policy which runs in tandem with MCIL.
- 6.1.3 This policy has worked well and informal consultation through the CIL collection group (Mayor and boroughs/authorities) and with developers suggests that this clear and easy to understand regime is welcomed so we have continued this idea in considering ~~proposals~~ proposals for MCIL 2. This conclusion is corroborated by the findings of the CIL Review Team in their report.<sup>4</sup>
- 6.1.4 We considered the following:
1. Consolidating the extant CIL and Crossrail S106 policy approach resulting in ~~Borough~~ borough rates with additional charges in Central London and North Docklands for offices, retail and hotels;
  2. Removing all Central London and North Docklands rates and relying totally on Borough rates;
  3. Removing the distinction between North Docklands and the remainder of Central London but ~~returning~~ retaining differential rates for commercial uses in Central London/North Docklands above the ~~Borough~~ borough rates; and
  4. Unifying all residential and commercial rates in Central London/North Docklands, ignoring underlying ~~Borough~~ borough rates, with borough rates to have effect only outside of Central London/North Docklands.
- 6.1.5 We had to balance the preference for simplicity against significant changes to the existing cumulative impact of the CIL/~~S106 policies~~ S106 policies on viability, particularly for retail and hotel uses where sharp changes in MCIL rates at this stage could cause issues.
- 6.1.6 Our recommendation ~~is that deo~~ for Central London ~~is for~~ the Mayor should ~~to~~ retain differential rates ~~for commercial uses but one set of rates. These~~ should apply to office, retail and hotel uses and apply across the proposed MCIL 2 Central London charging area, including North Docklands., where rents for offices, for example, are typically at or below West End and City levels. All other uses to be charged at the borough rates.

## 7 Other zones considered

7.1.1 The Mayor considered the possibility of including station zones for MCIL around the stations anticipated to be on the Crossrail 2 route. The Mayor decided not to take this approach at this stage for the following reasons:

- It would increase the complexity of the MCIL 2 charging schedule.
- Crossrail 2 is still being worked up and therefore station locations cannot be predicted with certainty.
- Our advice is that it is unlikely that viability impacts will be discernable at this early stage.
- The Mayor is exploring proposal for land value capture with could contain other mechanisms for capturing value outside of the CIL regime.<sup>5</sup>

7.1.2 The Mayor also considered continuing with the ~~kilometre~~ 1km zones around Crossrail ~~station~~ stations in outer London that were established in the ~~£406S106~~ policy ~~but He has considered differential charges within these zones for office and/or residential uses. However, in the interest of simplicity it is proposed reinforced by the CIL Review Team in their report, we do not to propose~~ recommend imposing such zones for MCIL 2 purposes.<sup>6</sup>

## 8 Proposed MCIL 2 charging schedule

8.1.1 We have established that there should be room for some increases in MCIL 2 rates above the present levels and that based on high level analysis this should not impact significantly on development volumes.

8.1.2 We set out below in Table 8 the proposed core rates for MCIL 2 to be operative from April 2019.

**Table 8: Proposed MCIL 2 charging rates from April 2019**

Charging band	Boroughs	Proposed MCIL 2 rate from April 2019 per sq m
Band 1	Camden, City of London, City of Westminster, Hammersmith and Fulham, Islington, Kensington and Chelsea, Richmond-upon-Thames, Wandsworth	£80
Band 2	Barnet, Brent, Bromley, Ealing, Enfield, Hackney, Haringey, Harrow, Hillingdon, Hounslow, Kingston upon Thames, Lambeth, Lewisham, <del>LLDC</del> , Merton, <del>OPDC</del> , Redbridge, Southwark, Tower Hamlets, Waltham Forest, <del>LLDC</del> , <del>OPDC</del>	£60
Band 3	Barking and Dagenham, Bexley, Croydon, Greenwich, Havering, Newham, Sutton	£25

8.1.3 For comparison purposes we set out in Table 9 these proposals rates together with the existing rates including indexation.

**Table 9: Proposed MCIL 2 charging rates from April 2019 compared to existing MCIL rates including indexation**

Proposed MCIL 2 charging band	Current rates - no indexation (per sq m)	Current rate + indexation to Q3 2016 (per sq m)*	Current rate + indexation to Q3 2016 + forecast to Q2 2019 (per sq m)*	Proposed MCIL 2 rate from April 2019 (per sq m)
Band 1 - current and proposed core CIL rates	£50.00	£64.57	£65.25	£80.00
Band 2 - current and proposed core CIL rates	£35.00	£45.20	£45.67	£60.00
Band 3 - current and proposed core CIL rates	£20.00	£25.83	£26.10	£25.00

\*Indexation as per BCIS All-in TPI (as at 03 February 2017)

8.1.4 In the proposed MCIL 2 Central London charging area (which incorporates a modified version of the CAZ & an area of North Docklands) the Mayor proposes additional MCIL 'top ups' as part of the combination of the S106 and MCIL into one MCIL 2 regime. The 400m 1km zones around the outer London Crossrail stations included in the current S106 policy are not incorporated into the proposals to aid simplicity and due to the relatively small additional amounts yielded by the policy. The boundaries of the CAZ/ North Docklands proposed MCIL 2 Central London charging area are considered further in chapter 910.

8.1.5 As a result the Mayor proposes the following CIL rates per sq m in Central London:

Formatted: JLL\_Heading Three

**Table 10: Proposed Central London MCIL 2 charging rates from April 2019**

Use	Proposed Central London MCIL 2 rate (per sq m)
Office	£185.00
Retail	£165.00
Hotel	£140.00
Residential/other uses	MCIL 2 <del>Boroughborough</del> rate (£80.00 / £60.00)

**Commented [GR2]:** Or an £80 per sq m rate for residential in the MCIL 2 Central London Contribution Area?

8.1.58.1.6 These rates are applied to the chargeable net area floor space as set out in the CIL Regulations.

8.1.68.1.7 For the purposes of comparison we present the current MCIL and S106 rates including indexation and the proposed Central London MCIL 2 rates for commercial uses in the table below.

**Table 11: Proposed Central London MCIL 2 charging rates from April 2019 compared to existing MCIL and Crossrail S106 rates including indexation**

	Central London				North Docklands			
	Current rates - no indexation (per sq m)	Current rate + indexation to Q3 2016 (per sq m)*	Current rate + indexation to Q3 2016 + forecast to Q2 2019 (per sq m)*	Proposed top-up MCIL 2 rate (2019) to preserve existing relativities (per sq m)	Current rates - no indexation (per sq m)	Current rate + indexation to Q3 2016 (per sq m)*	Current rate + indexation to Q3 2016 + forecast to Q2 2019 (per sq m)*	Proposed top-up MCIL 2 rate (2019) to preserve existing relativities (per sq m)
<b>Offices</b>								
S106 rate / Central London MCIL 2 rate	£140.00	£153.77	£162.09	£185.00	£190.00	£208.69	£219.98	£185.00
Current and proposed core CIL rates	£50.00	£64.57	£66.25	£80.00	£35.00	£45.20	£45.67	£60.00
Office top-up	£90.00	£89.20	£95.84	£105.00	£155.00	£163.49	£174.30	£125.00
<b>Retail</b>

Current and proposed core CIL rates	£50.00	£64.57	£66.25	£80.00	£35.00	£45.20	£45.67	£60.00
Retail top-up	£40.00	£34.28	£38.95	£85.00	£86.00	£87.70	£94.42	£105.00
<b>Hotel</b>								
S106 rate / Central London MCIL 2 rate	£61.00	£67.00	£70.62	£140.00	£84.00	£92.26	£97.25	£140.00
Current and proposed core CIL rates	£50.00	£64.57	£66.25	£80.00	£35.00	£45.20	£45.67	£60.00
Hotel top-up	£11.00	£2.43	£5.38	£60.00	£49.00	£47.06	£51.58	£80.00

\*Indexation as per BCIS All-in TPI index and forecasts (as at 03 February 2017) for MCIL rates and as per CPI for the Crossrail S106 rates (Oxford Economics forecasts)

**Formatted Table**

## 9 Assessment of impact on economic viability

### 9.1 Testing the impact of the proposed MCIL 2 rates

9.1.1 Our way of responding to this question is to look at the size of CIL in the context of the other "moving parts" in the development appraisal.

### 9.2 Original MCIL as a percentage of highest and lowest average house prices within each charging **groupband**

9.2.1 For the purpose of considering this question in setting the original MCIL rates in 2011-12, we analysed the CIL payable on a typical residential unit of 83.33 sq m in size as a percentage of the highest and lowest average house prices within each charging **groupband** (i.e. £50, £35 and £30 per sq m). We undertook this analysis adopting a net increase assumption ~~of between 73% and 100% of gross internal area and at a 100% net increase to represent a 'worst-case scenario' where there is no set-off for CIL payable against existing floor area.~~ Although our analysis of planning application data suggests a unit size of 88.74 sq m, this data includes affordable and specialist housing types and so for the purposes of considering the impact of MCIL 2 we have continued to use a 'typical' residential unit of 83.33 sq m to aid comparability with the previous MCIL evidence.

9.2.2 We present the findings from the original viability evidence below in Tables ~~44~~12 and ~~42~~13.

**Table 12: Original MCIL payable on a typical residential unit of 83.33 sq m GIA at 73% and 100% net increase in GIA (2011-12)**

<b>Band</b> <b>Group</b>	MCIL rate per Sq M	MCIL payable at 73% net increase in GIA	MCIL payable at 100% net increase in GIA
<b>GroupBand 1</b>	£50	£3,050	£4,167
<b>GroupBand 2</b>	£35	£2,135	£2,917
<b>GroupBand 3</b>	£20	£1,220	£1,667

Formatted: Font: 10 pt

**Table 13: Original MCIL as a percentage of highest and lowest average house prices by **Groupband** assuming 73% and 100% net increase in GIA, as per original evidence (2011-12)**

<b>GroupBand</b>	Borough	Average House Price (as per HPI data April 2010)	MCIL payable (no indexation) assuming 73% Net increase in GIA	MCIL as percentage of highest and lowest average house price in each <b>groupband</b> assuming 73% net increase in GIA	MCIL payable (no indexation) assuming 100% Net increase in GIA	MCIL as percentage of highest and lowest average house price in each <b>groupband</b> assuming 100% net increase in GIA
<b>GroupBand 1 highest average house price</b>	Kensington and Chelsea	£866,295	£3,050	0.35%	£4,167	0.48%
<b>GroupBand 1 lowest average house price</b>	Wandsworth	£373,641	£3,050	0.82%	£4,167	1.12%
<b>GroupBand 2 highest average house price</b>	Hackney	£361,035	£2,135	0.59%	£2,917	0.81%
<b>GroupBand 2 lowest average house price</b>	Hillingdon	£259,175	£2,135	0.82%	£2,917	1.13%
<b>GroupBand 3 highest average house price</b>	Havering	£256,611	£1,220	0.48%	£1,667	0.65%
<b>GroupBand 3 lowest average house price</b>	Barking and Dagenham	£213,777	£1,220	0.57%	£1,667	0.78%

9.2.3 Since the original MCIL evidence was prepared, current planning application data provided by the GLA demonstrates suggests that the typical net increase in floor space is in the order of 50%. This figure is calculated using all housing data (including affordable) and is based on information supplied in planning applications.

9.2.4 We present in Tables 13 and 14 the impact of the original MCIL as a percentage of the highest and lowest average house prices within each charging group, but adopting a 50% net increase in GIA assumption in line with current practice.

**Table 14: MCIL payable on a typical residential unit of 83.33 sq m GIA at 50% and 100% net increase in GIA (2011-12)**

Group	MCIL rate per Sq.M	MCIL payable at 50% net increase in GIA	MCIL payable at 100% net increase in GIA
Group 1	£50	£2,083	£4,167
Group 2	£35	£1,458	£2,917
Group 3	£20	£833	£1,667

**Table 15: MCIL as a percentage of highest and lowest average house prices by Group assuming 50% and 100% net increase in GIA, based on original evidence (2011-12)**

Group	Borough	Average House Price (as per HPI data April 2010)	MCIL payable (no indexation) assuming 50% Net increase in GIA	MCIL as percentage of highest and lowest average house price in each group assuming 50% net increase in GIA	MCIL payable (no indexation) assuming 100% Net increase in GIA	MCIL as percentage of highest and lowest average house price in each group assuming 100% net increase in GIA
Group 1 highest average house price	Kensington and Chelsea	£866,295	£2,083	0.24%	£4,167	0.48%
Group 1 lowest average house price	Wandsworth	£373,641	£2,083	0.56%	£4,167	1.12%
Group 2 highest average house price	Hackney	£361,035	£1,458	0.40%	£2,917	0.81%
Group 2 lowest average house price	Hillingdon	£259,175	£1,458	0.56%	£2,917	1.13%
Group 3 highest average house price	Havering	£256,611	£833	0.32%	£1,667	0.65%
Group 3 lowest average house price	Barking and Dagenham	£213,777	£833	0.39%	£1,667	0.78%

9.2.59.2.3 As expected, the original MCIL as a percentage of average house prices using a net increase in floor area assumption of 50% is lower, ranging from 0.24% to 0.56% (Table 14) as opposed to 0.35% to 0.82%

(Table 12) on the original 73% net increase assumption is more appropriate so our analysis concentrates on this assumption.

### 9.3 Testing MCIL 2 proposals as a percentage of highest and lowest average house prices within each charging groupband

9.3.1 We have undertaken the same analysis to test the current MCIL 2 proposals and our findings are presented in Tables 4514 and 4615:

Table 14: Proposed MCIL 2 payable on a typical residential unit of 83.33 sq m GIA at 50% and 100% net increase in GIA (2011-12)

GroupBand	Proposed MCIL 2 rate per Sq M	MCIL payable at 50% net increase in GIA	Proposed MCIL 2 payable at 100% net increase in GIA
GroupBand 1	£80	£3,333	£6,667
GroupBand 2	£60	£2,500	£5,000
GroupBand 3	£25	£1,042	£2,083

Formatted Table

Formatted Table

Formatted Table

~~9.3.2 The proposed MCIL 2 rates as a percentage of the highest and lowest average house prices in each group on a net increase in gross internal floor area assumption of 50% ranges from 0.26% to 0.64% and between 0.51% and 1.28% in a worst case scenario where there is no set off for existing floor area.~~

#### 9.4 Analysis of proposed MCIL 2 rates

9.4.1 ~~On a worst case scenario (i.e. where a site is previously undeveloped) MCIL 2 proposals do in some cases exceed 1.00% (but no higher than 1.28%) of average house prices. However, in circumstances where there is no existing building, the hurdle of existing use value which must be exceeded to achieve a viable development is likely to be lower, and therefore the capacity to absorb CIL is likely to be higher.~~

9.4.2 In all cases payments in the order of 0.2651% - 1.28% are relatively modest and might, for example, be compared with stamp duty land tax of between 1% and 12% of purchase price when transactions occur.

9.4.3 Major movements in building costs and values over the development cycle are likely to have far greater impacts on viability than CIL at the levels suggested in this paper.

9.4.4 Across the charging ~~groups~~bands the percentage of the proposed MCIL 2 payable on a typical unit is broadly in line with the original MCIL. For the borough with the lowest average house prices in Groupband 2 however, the proposed MCIL payable increase modestly from 1.13% on the original rates of the average house price to 1.28%, assuming ~~near 100% net off for any increase in the developable area over existing floor area in a worst case scenario area.~~

##### 9.4.4

9.4.5 To test the viability headroom we have undertaken an illustrative appraisal based on Hounslow's borough CIL viability evidence because they have the lowest average house prices in our proposed middle band for charging purposes.

9.4.6 Hounslow's viability evidence was published in 2014. The Council's viability consultants undertook notional residual appraisals to benchmark residual land values against an existing use value plus margin and set the ~~Borough's~~borough's CIL rates at a level leaving a 'buffer' of circa 30%. On their lowest charging rate of £70 per sq m, the buffer equates to £35 per sq m.

9.4.7 We have taken the value and cost for the lowest value area in Hounslow as per the Council's 2014 viability evidence (residential values of £290 per sq ft / ~~£~~£3,122 per sq m) and made the assumption ~~of that~~ a 20% developer's profit on cost would be required ~~to form the~~. To replicate the approach taken in the Council's evidence we have provided an illustrative appraisal based on 1 sq m of floor space and assuming a 100% net increase in GIA ~~for the development as undertaken by the Council (see para 5.8 of viability evidence).~~. The 2014 scenario we have undertaken calculates ~~for~~ the amount available for total development costs, including land, fees and finance, after the ~~Borough's~~borough CIL and Mayoral CIL allowances have been deducted, with a viability buffer of £35 per sq m remaining- (see table 16, below).

9.4.8 The Land Registry House Price Index shows an increase in average house prices in Hounslow in the order of 27% between 2014 and 2016. The BCIS All-in TPI index shows a cost increase in the order of 17% over the same period.

9.4.9 We have ~~replicated~~reproduced the appraisal to reflect values and cost changes since the ~~Borough's~~borough's viability evidence was prepared by increasing the value by 27% and the total development costs by 17%, (including land, fees and finance), after the ~~Borough's~~borough CIL and proposed Mayoral CIL 2 allowances have

Formatted: JLL Body Text

been deducted. Our findings (see Table 17 below) show that the differential between cost and value growth over the period since the Council's viability evidence was undertaken now provides for a significantly higher buffer of £305 per sq m even after accounting for the increased proposed MCIL 2. On this basis, notwithstanding that on a typical unit the proposed MCIL 2 rates equate to 1.28% of the average house price as at 2016 (see Table 4615 above) there is enough buffer to be able to cater for the level of proposed increase.

**Table 16: Hounslow viability and buffer analysis – 2014-2016**

Appraisal inputs	2014 (per sq m)	2016 (per sq m)
Value per sq m	£3,122	£3,966 (+27% average price increase)
Developer's profit at 20% on cost	£520	£661
Total amount available for development costs including CIL	£2,601	£3,305
BCIL	-£70	-£70
MCIL	-£35	-£60
Amount left for total development costs including land and 'buffer'	£2,496	£3,175
Amount left for total development costs including land	£2,461	£2,870 (+17% BCIS All-in TPI increase)
Buffer	£35	£305

Inflation assumptions: Land Registry HPI Average Price November 2016 (£389,458) and March 2014 (£306,569) reflects an increase of 27% in value.

BCIS All-in TPI index as at 03 February 2017: November 2016 index (288) and February 2014 (247) reflects an increase of 17% in costs.

## 9.5 Testing commercial viability

- 9.5.1 For the most part the higher rates in the proposed MCIL 2 Central London ~~contribution~~ charging area – for boundaries see the following chapter - (Central London and North Docklands) are a consolidation of the MCIL and S106 policies. However, the rates for retail and hotel have been increased to reflect a better fit with viability (the S106 policy was set relative to the adverse impacts of congestion on the transport network). In order to consider the possible impacts of the increased levels of the proposed Central London MCIL 2 (compared to the Crossrail S106 liability) we have considered ~~Boroughborough~~ CIL viability evidence in Westminster, the City of London and Tower Hamlets which make up the majority of the proposed Central London MCIL 2 Central London ~~contribution~~ charging area.
- 9.5.2 Westminster's ~~Boroughborough~~ CIL viability was prepared by BNP Paribas Real Estate in June 2015 ahead of the ~~examination in public.~~ We consider in particular the amount of 'buffer' between the maximum rates and the adopted rates for retail and hotels. The 'buffer' left after BCIL is detailed in their table 1.14.2 (inserted as table 817 below). For retail, the proposed increase in MCIL over the extant S106 policy moves the current rate (including indexation) of £104.20 up to £165.00 per sq m. The hotel rate increases from £70.62 to £140.00 per sq m.
- 9.5.3 The increase of circa £60.80-£69.38 per sq m compares to the buffer identified for the Fringe area in the Westminster CIL viability analysis (see below) of between circa £400 (hotel) and £1,025 (retail) per sq m. This suggests that the proposed increase in MCIL 2 can be absorbed in the development economics of the Fringe

area which has the lowest values in Westminster and is a relatively small part of the borough compared to the size of the core and prime areas.

**Table 8.17: Westminster viability and buffer analysis (Maximum CIL rates – commercial) June 2015**

Development type	Area	Maximum CIL rate £s per sq m	Suggested rate after buffer £s per sq m	Viability 'buffer'
Offices	Prime	£3,100	£200	94%
	Core	£2,569	£150	94%
	Fringe	£1,996	£50	97%
Retail (A-class uses, SG retail, nightclubs and casinos)	Prime	£3,407	£200	94%
	Core	£3,880	£150	96%
	Fringe	£1,075	£50	95%
Hotel	Prime	£3,289	£200	94%
	Core	£2,036	£150	93%
	Fringe	£454	£50	89%

Source: Table 1.14.2 titled 'Maximum CIL rates – commercial' Community Infrastructure Levy: Viability Assessment prepared for Westminster City Council (June 2015), BNP Paribas Real Estate (p.6)

9.5.4 In compiling our London Retail Development Map 2017, JLL identified key retail areas, other retail areas and development schemes<sup>7</sup>. Of ~~number of the~~ **76 development** schemes we recorded the vast majority were in Westminster and of these a substantial majority are mixed use. It is likely therefore that most retail schemes will in fact be mixed use where the other uses are key factors in assessing viability. Typically these other uses are offices, residential and occasionally hotel.

9.5.5 This view is shared by Gerald Eve, who in preparing the City of London CIL viability assessment state at paragraph 7.12 that 'as retail units predominantly comprise a small element of larger office, residential or hotel schemes in the City we have not separately appraised retail development but incorporated it as the ground floor use in other schemes.'<sup>7</sup>

9.5.6 Gerald Eve further comment ~~for on~~ both retail and hotel development at 10.14 "given the limited amount of development in isolation of these uses, they are usually either as part of mixed use schemes or ancillary to the predominant use. Either way, it is considered, after viability testing in both isolation and as part of a scheme, that these uses should have a rate similar to that of offices."<sup>8</sup>

**9.5.7 We are content that retail and hotel uses are for the most part likely to be within mixed use schemes where the viability of other uses will be the major determinant of the viability of the scheme in question. We therefore**

<sup>7</sup> See 'Community Infrastructure Levy: Economic Viability Study on behalf of: The City of London Corporation,' Gerald Eve (January 2013), Retrieved from <https://www.cityoflondon.gov.uk/services/environment-and-planning/planning/planning-policy/local-development-framework/Documents/CIL-viability-assessment.pdf> last accessed 17/03/2017 <https://www.cityoflondon.gov.uk/services/environment-and-planning/planning/planning-policy/local-development-framework/Documents/CIL-viability-assessment.pdf> last accessed 17/03/2017.

<sup>8</sup> Ibid

conclude that increases in retail and hotel MCIL 2 rates are unlikely to affect significantly the viability of schemes with retail or hotel content.

9.5.79.5.8 Turning to the North Docklands area, we have reviewed the ~~Borough~~borough CIL viability evidence prepared by BNP Paribas Real Estate in March 2013<sup>9</sup>. On page 7, the summary of possible maximum borough CIL rates in North Docklands for retail uses (A1-A5) is £150 per sq m and for convenience based supermarkets, superstores and retail warehousing is £310 per sq m borough-wide. In ~~practise~~practice Tower Hamlets are not charging ~~at the maximum rates and this together, combined~~ with retail likely ~~to be a supporting component of a~~ mixed use scheme, should mean that MCIL 2 rates at the level proposed can be absorbed into development appraisals without impeding ~~the prospect delivery of a development being delivered.~~

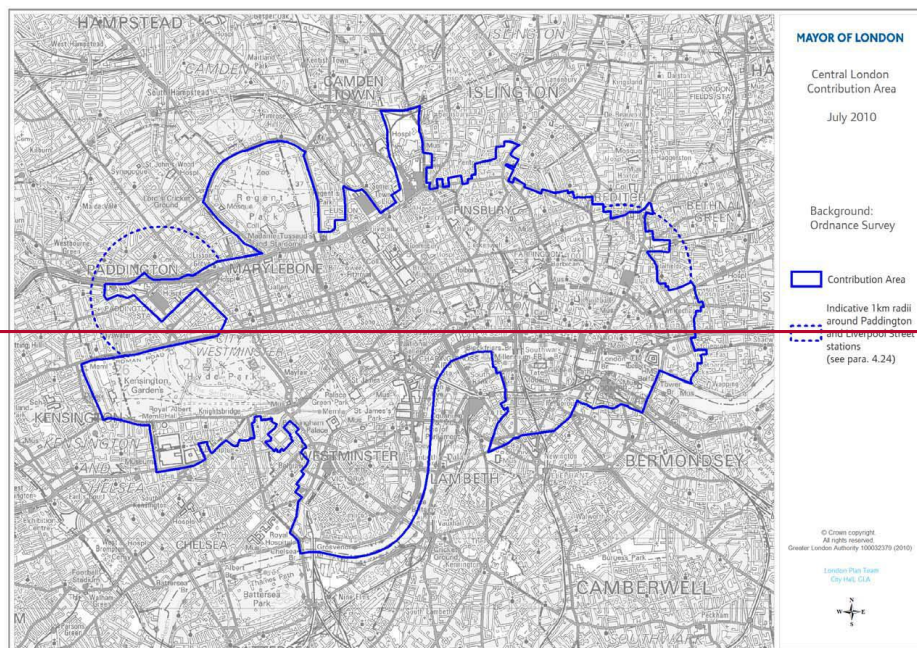

9.5.89.5.9 In conclusion, in our opinion the rates proposed for offices, retail and hotels in the proposed MCIL 2 Central London ~~contribution~~charging area should be capable of absorption within development appraisals without hindering to any material extent the amount of development constructed.

## 10 MCIL 2 Central London contribution charging area

Figure 8: Current Central London Crossrail S.106 contribution area (excluding North Docklands)

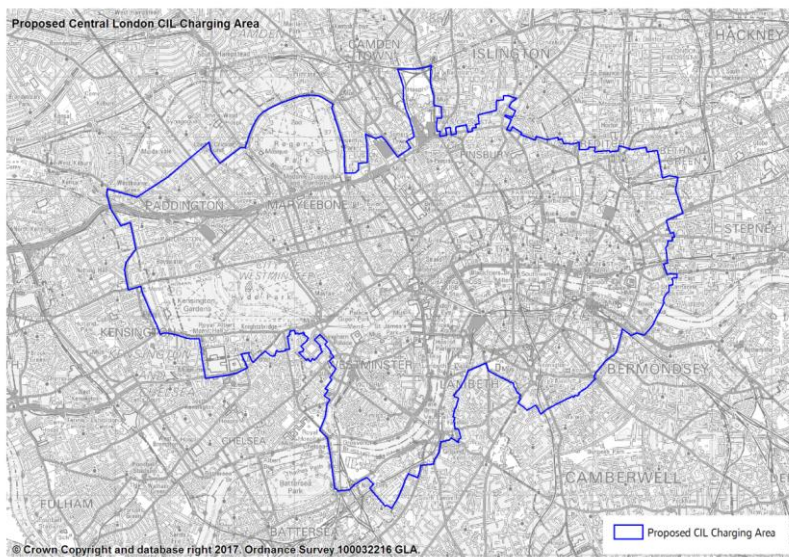

Commented [GR3]: Check definition

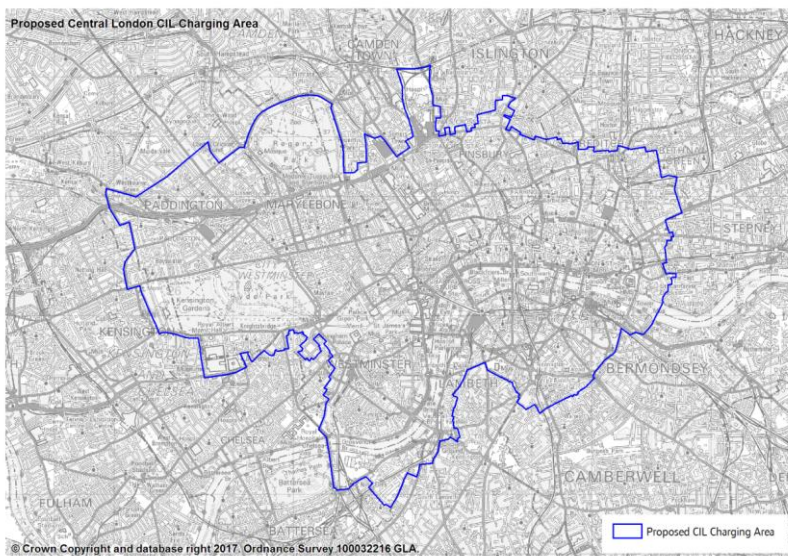

- 10.1.1 The current Crossrail S106 boundary (excluding North Docklands) is an amended version the Central Activities Zone (CAZ) defined in the London Plan. The boundary was modified during the examination process to remove areas of Lambeth and Wandsworth due to viability concerns at the time. 1 kilometre radii around Crossrail stations at Paddington and Liverpool Street based on impact of development on congestion are edged dashed blue.
- 10.1.2 As part of the MCIL 2 viability analysis we have ~~prepared~~<sup>proposed</sup> an ~~updated~~ MCIL 2 Central London ~~contribution charging~~ area that reinstates part of Lambeth, Wandsworth and Southwark as per the London Plan CAZ boundary and that incorporates the 1km zones around Paddington and Liverpool Street stations along natural road boundaries to avoid situations where parts of buildings are captured. ~~These 'natural boundary' modifications are shaded red on the plan in Figure 9.~~ A consolidated boundary for MCIL 2 purposes (excluding North Docklands) is presented in Figure 10.
- 10.1.3 The inclusion of the parts of the CAZ south of the river that are currently excluded reflects the very significant commercial developments taking place in this area. Of particular significance is the major pre-letting of much of the office content of the Battersea Power Station development to Apple as well as the commercial content of the Shell Centre redevelopment. The levels of rent/value in these south of the river locations demonstrate that these are now properly part of Central London for viability purposes.

**Figure 9: Proposed MCIL 2 Central London charging area (excluding North Docklands)**

10.1.4 In a similar manner we have sought to rationalise and simplify the boundaries of the North Docklands area by using roads and river as boundaries rather than a circular zone around the Canary Wharf Station. -The existing and proposed boundary is boundaries are shown on Figure in Figures 10 and 11.

## 11 Affordable Housing

11.1.1 A review of ~~Borough~~ borough Affordable Housing Policies (see table 18, below) shows that the vast majority of ~~boroughs~~ have 35% or more affordable housing as their target, ~~which is consistent with the Mayor's policy aspirations.~~ The reality is that when looking at past data ~~sifted to give~~ create a proxy for affordable housing procured through S106 Agreements it seems that much less than 35% ~~was being~~ has been achieved. There may be many reasons for this but the most likely of these are reduction in affordable housing grant, funding or similar which might otherwise be used to help bridge the gap between cost and value for deeply discounted products such as affordable rented units, high existing use values which would otherwise deter change of use, and the application of viability in planning decisions which has meant developers may not have taken affordable housing and other policy requirements fully into account when bidding for sites ~~and then use the price paid for the site or an unadjusted market values in viability assessments to reduce affordable housing percentages.~~ The Mayor's recent draft, Affordable Housing and Viability Supplementary Planning Guidance, seeks to address some of these issues with ~~the~~ a view to ~~increase~~ increasing the amount of affordable housing delivered through the planning system.

Commented [JP6]:

11.1.2 The Mayor has publicly stated his commitment to increasing the level of affordable housing supply in London, with the aim of ensuring that half of all new homes delivered in London would be affordable. His first step on that route was the issuing of the draft Affordable Housing and Viability SPG which was published for consultation in November 2016 and it is intended that future iterations of the London Plan will reflect this overall trajectory.

Commented [GR7]: Comments provided by Jennifer Peters in email 15/03/2017

11.1.2 Whatever changes are made to the MCIL rates ~~we will demonstrate that~~ as a percentage of overall development costs MCIL remains a very small element ~~of the overall cost of production and whilst.~~ Whilst in some instances where underlying viability is an issue ~~an increased MCIL rate~~ might make matters marginally worse, there will be many other instances where ~~the additional CIL/MCIL~~ can easily be accommodated within ~~the development~~ economics ~~of the transaction as has been shown.~~ demonstrated by the "buffer analysis" undertaken ~~for some boroughs as part of their supporting documentation behind their Charging Schedules in chapter 9, above.~~ Overall we suggest that ~~whether or not affordable~~ actual housing percentages ~~that are~~ achieved are likely to be much more dependent on housing policy, the grant regime and the cost of building housing ~~construction~~ rather than the MCIL rates ~~and therefore.~~ Therefore we conclude that ~~whatever the~~ impact raising MCIL will have it is likely to be minor.

Table 18: Affordable Housing Policy by ~~Borough~~ borough

12 MCIL 3?

- 12.1.1 The following is not evidence for the Preliminary Draft Charging Schedule. However, the Mayor appreciates that property development may take many years between inception and completion and so wishes to assist the property industry by providing some forward guidance on possible ~~MCIL3~~MCIL 3 rates and ~~approach~~approaches assumed to take effect in 2024 subject to viability and the outcome of a further EiP.
- 12.1.2 MCIL 2 is a transitional charging schedule where viability issues are judged not only on fundamentals but also on what the market has factored into its thinking as a result of the combination of MCIL and the Crossrail S106 ~~regime~~regimes.
- 12.1.3 MCIL 3 is likely to be a simpler proposition. We would envisage one Central London area with one set of rates applying to all chargeable development within its boundary regardless of the underlying ~~Borough~~borough.
- 12.1.4 It is likely that a rationalising of the residential rate and emerging new commercial locations will bring with them a review of the boundary of Central London. Areas that might be added could include Kensington & Chelsea, Belgravia, Victoria/Pimlico and areas north of the Euston Road.
- 12.1.5 Other possibilities include having a single commercial charge for all uses in Central London and inclusion of Crossrail 2 station zones. We can see the attraction of one single rate at say £150 per sq m applied to all uses in Central London. The position will be monitored. However, for the purposes of providing this guidance we have adopted variable rates in Central London reflecting the fact that CIL must live alongside the Affordable Housing Policy.
- 12.1.6 In ~~setting-proposing possible~~~~Band 3~~ rates for MCIL 2, the Mayor has chosen to keep rates low to encourage development and ~~protect~~protecting affordable housing percentages in the boroughs with the lowest house prices.- The MCIL 3 rates, if adopted, would restore the relativities to those in the current Charging Schedule.
