---

Thanks Tom,

We've just decided to get on with doing what we can now to make the crossing safer as we know any larger scale changes will take several years to get in and resources are tight.

Good news no modelling required for the countdown. I'm waiting to hear back from TI but hoping they can design up quickly and we can implement in the Summer as we won't need a consultation either.

We'll still ask TDE to do a staggered and straight across option for the crossing for the future and keep you in the loop for modelling.

Thanks,

Liane

Hi Liane,

That's great news.

That's correct – we wouldn't need to carry out any modelling for the addition of countdown.

Please keep us in the loop regarding the straight across crossing proposals, as we would likely want to model the designs for this.

Andy – some good news for Vision Zero – as the addition of countdown here should make a significant improvement safety-wise for pedestrians at this crossing, where there have been fatalities in the past.

Many thanks,

Tom

Hi Claire and Thomas,

We've now decided to crack on with the upgrade of this staggered crossing to enable pedestrian countdown to be installed. So no other changes, just countdown. I just wanted to hear from you about whether that causes any issues to you... I assume modelling wouldn't be required as everything would stay the same except the countdown? I've literally just asked TI to get started on the design for the upgrade so once they have a drawing we can send that on to you for you to check over if you'd like.

Meanwhile we will still ask TDE to look in to designing a scheme for the longer term that would explore a straight across crossing and we'll include you in the initial discussions with TDE. We are still awaiting a designer for that one so nothing happened since we last spoke!

Thanks,

Liane
