Dear Members' Correspondence,

Kind reminder. I wondered when I can expect a response to my email below.

Kind regards

**Subject:** FW: TfL Bus data for Norwood Road and Croxted Road

Dear Members' Correspondence,

I have examined the data for northbound traffic flow on Croxted Road at latitude/longitude 51.44662/-0.09596 (the junction of Croxted Road and Turney Road) during the morning peak 7am-10am that has been published on TfL's FOI website on 20<sup>th</sup> April and 10<sup>th</sup> June.

As per my email below addressed to Claire Alleguen, could you please advise the following:

1. Why the daily 7-10am vehicle flow data from 01/01/2019 – 11/04/2022 presented in the data set published on 20<sup>th</sup> April is exactly 1.5 times the vehicle flow for the same period given in the set of data published on 10<sup>th</sup> June?
2. Which of the two sets of data is correct?
3. Whether these figures include traffic joining Croxted Road (Northbound) from Turney Road (East and West) – it is difficult to tell as the search for the exact location on the basis of the coordinates given seems to show a spot right in the middle of the junction.

Also, would it be possible please to have the vehicle flow data over the same period, 7am-10am, for:

1. Croxted Road Northbound at the junction of Guernsey Grove

2. Milkwood Road Southbound leading into the junction with Herne Hill
3. Dulwich Road Eastbound leading into the junction with Norwood Road.

(I don't want to request this via an FOI, so am hoping it ought to be possible to get this data without doing so.)

Thanks and regards

**Subject:** RE: TfL Bus data for Norwood Road and Croxted Road

Dear Claire,

I have compared the Croxted Road data presented in response to an FOI request on 10<sup>th</sup> June with that presented on 20<sup>th</sup> April and there seems to be a disparity in the figures for Northbound traffic on Croxted Road at latitude/longitude 51.44662/-0.09596 (I haven't checked the rest): the vehicle flow from 7am-10am on the spreadsheet provided on 20<sup>th</sup> April is exactly 1.5 times higher than the vehicle flow at the same time and location provided on 10<sup>th</sup> June. (Data from 1-11 March 2022 is missing from the first data set.)

Could you please advise the following (or kindly connect me with someone who can):

1. Why is the vehicle flow given in the first set of data 1.5 times higher than in the second set.
2. Do these figures include traffic joining Croxted Road (Northbound) from Turney Road (East and West) – it is difficult to tell as the search for the exact location on the basis of these coordinates seems to show a spot right in the middle of the junction.

Also, would it be possible please to have the vehicle flow data for Croxted Road Northbound at the junction of Guernsey Grove 7am-10am over the same period? (I don't want to request this via an FOI.)

Kind regards
