

Pell Frischmann		Project No. 102384
		Version No. Rev A
TECHNICAL NOTE	Project Arnos Grove and Cockfosters	Date 07/06/2019
	Subject Review of on-street car parking survey (Cockfosters)	By [REDACTED]

Pell Frischmann is commissioned by TfL to provide transport planning advice in connection with the redevelopment of the existing car parks at Arnos Grove and Cockfosters Stations. This note provides a review of the car parking survey undertaken on 30th April 2019 and 1st May 2019 for the area around Cockfosters Station. The study area for the survey is shown in Figure 1 and represents an area approximately 960m walking distance from the station entrance.

Figure 1: Extent of car parking survey

The results from the parking survey shows that overall on average the unrestricted car parking space utilisation was 40%, indicating that there are approximately 1,150 spaces unoccupied in the study area. The survey results for the wider study area are shown in Table 1. The full data set is appended to this note.

Additional review of the data shows that for the roads which are within 400m walk distance of the station entrance (shown in Figure 2), the following points are observed:

Chalk Lane: There is limited car parking available due to presence of double yellow lines and extended sections of the road where the width is restricted. There is however parking along the narrower sections of the road where no yellow lines are painted (measured capacity for 16 vehicles). The utilisation of these parking areas is high throughout most of the survey periods (Tuesday AM and PM peaks, and Wednesday AM peak), with the analysis showing between 88% and 106% utilisation.

Table 1: Car parking survey results (all streets in the study area)

Figure 2: Roads within/ partial within 400m of Cockfosters Station

Church Way: This section of the study area is a private road adjacent to the Church and Trent CoE Primary School. This area would not be available for use by those who were unable to find parking in the local area.

Belmont Close: This road was omitted from the survey as the parking is within a private estate. This area would therefore not be available for use by those who were unable to find parking in the local area.

Belmont Avenue: The onsite observations showed that between 27% to 32% of the spaces were utilised at night, and 32% to 45% of the 128 unrestricted car parking spaces were utilised during the peak hours surveyed. This indicating that there is spare capacity to park on this road, and this is being used by non-residents.

Mount Pleasant: The car parking data for this road shows that the car parking utilisation at night was 15% and 17%, and the peak hour data shows that the utilisation of the 158 spaces increases to between 29% and 41% in the AM and PM peak periods. This indicates that there is spare capacity to park on this road, and this road is being used for parking by non-residents.

Ashurst Road: There are 124 unrestricted car parking spaces of which 42% and 43% were used overnight. The peak hour utilisation of these spaces was observed to be between 42% and 56% indicating that there is spare capacity on the road and this is being used to a lesser extent by non-residents (compared to Mount Pleasant and Belmont Avenue).

Mount Close: There are fewer spaces available on this road (11 unrestricted spaces). The overnight utilisation of these spaces was 73% and the utilisation in the peak hours was between 73% and 91%. This suggests that there is some parking by non-residents on this road.

Heddon Court Avenue: The overnight utilisation of the 109 spaces is 35% and 39%. This increases to between 36% and 56% during the peak hours, with higher utilisations generally in the PM peak, which may suggest the parking is used by those using the shops and other facilities on Cockfosters Road.

The Paddocks: The parking utilisation of the 10 unrestricted spaces on this road is 40% and 50% overnight. The utilisation increases to between 50% and 70% during the day.

Gatcombe Way: This road was omitted from the survey as the parking is within a private estate. This area would therefore not be available for use by those who were unable to find parking in the local area.

Cockfosters Road: The measurements show that there is capacity for 204 vehicles to park on yellow lines outside of the hours of 8am to 6:30pm. The survey shows that a maximum of two vehicles parked on the yellow lines during the peak periods surveyed and no vehicles were parked at 00:30 at night. The utilisation of the 30 pay and display car parking spaces was between 10% and 70%.

Westpole Avenue: There are 127 unrestricted car parking spaces on this road and the overnight utilisation of these was 52% and 53%. The peak hour utilisation of these spaces ranged between 35% and 64% indicating that the usage of these spaces could be predominantly by residents and their visitors.

Bramley Road: The utilisation of the 74 unrestricted car parking spaces overnight was 19% and 27%. The utilisation during the peak hours ranged between 16% and 27%.

Betjeman Court: This is a service road to the rear of the commercial properties fronting Bramley Road. The utilisation of the unrestricted parking is in excess of the measured capacity overnight and is between 50% and 138% utilised during the peak hours surveyed.

Galva Close: This road was omitted from the survey as the parking is within a private estate. This area would therefore not be available for use by those who were unable to find parking in the local area.

Gloucester Gardens: The overnight utilisation of the 82 spaces on this road was 50% and 44% and the peak hour utilisations ranged from 43% to 66%. This indicates that the usage of these spaces could be predominantly by residents and their visitors.

West Close: The overnight utilisation of the 9 spaces on this road was 67% and 78% and the peak hour utilisations ranged from 11% to 22%. This indicates that the usage of these spaces is predominantly by residents.

In summary, the car parking survey is showing that the utilisation of the unrestricted car parking spaces across the wider survey area was 40%, indicating that there are approximately 1,150 spaces unoccupied in the study area.

It also shows that the roads within 400m walk distance of the station entrance have approximately a minimum of 450 unrestricted car parking spaces unoccupied during the survey periods. This demonstrates that there is potential in the surrounding streets to accommodate the displaced car parking, and the strategy to manage this needs to be discussed and agreed with the London Borough of Enfield.
