

# DETERMINANTS OF CONFIDENCE IN AUTOMATED CARS AND TRAINS

Accent is registered to the market, opinion and social  
research International Standard ISO 20252

# Academic project conducted by UCL of interest to TfL

2

Research objectives outlined in briefing document

1. Explore customers feeling about automated cars and trains
2. Understand degree of trust (defined as safety, reliability and security) in automated cars and trains
3. Explore related concerns that undermine trust in automated trains
4. Identify specific factors that would address concerns

# Sample structure

3

## Overview of Key Insights

# Key Insights

5

1

Automated vehicles are becoming more mainstream; definitely seen as part of the short term future for road and rail

2

Distinct difference in response to automated cars and automated trains. Less confidence in automated cars than automated trains

3

DLR is a strong point of reference for automated trains for London Underground users

4

Focus for users of London Underground is about getting from A-B safely, quickly and reliably – they pay limited attention to how that is fulfilled

5

Even the most confident feel more comfortable on an automated sub surface vs. automated tube train

6

Biggest concerns relate to lack of human presence – virtual voice/reassurance can overcome fears

7

Provision of relevant and evidence based information increases acceptability of unattended automated tube trains

**Ki1**

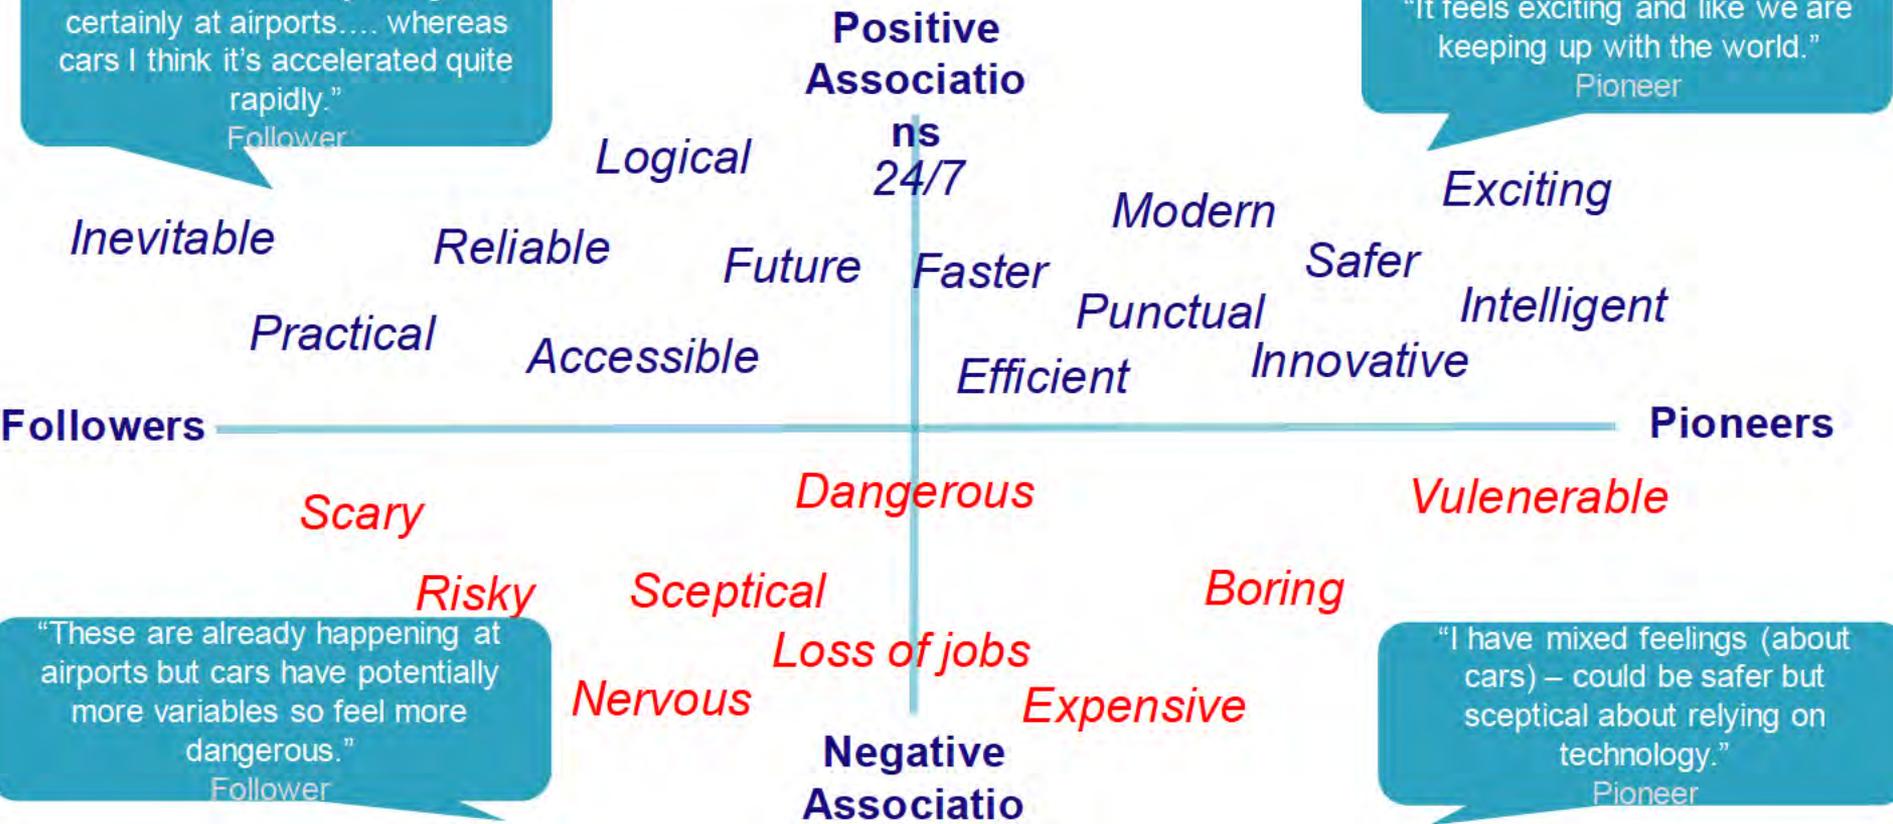

Automated vehicles are becoming more mainstream; definitely seen as part of the short term future for road and rail

# Across Follower and Pioneer types, there is an understanding and acceptance that automated vehicles are the future

7

"Trains are already doing it, certainly at airports.... whereas cars I think it's accelerated quite rapidly."  
Follower

"It feels exciting and like we are keeping up with the world."  
Pioneer

# Customers using 'driverless' terminology and relate it to DLR and automated cars

8

"Innovative...**Driverless**, is that a word?"  
Pioneer

"**Driverless** cars is just a cheaper version to a taxi?"  
Follower

"That's not a bad point actually, because if it's **driverless** then yeah why can't they run 24 hours."  
Pioneer

"Its quite normal. The DLR is automated. The DLR has always been **driverless**?"  
Follower

"I think just like this gentleman said, if it was all **driverless** cars on one road then I don't think I'd have a problem with it. But it's a mixture of both and the unpredictability of humans that would worry me."  
Pioneer

"I know that Google and other companies are trialling completely **driverless** cars, but other car companies out there are all in it. I've already mentioned the parking."  
Follower

## Ki2

Distinct differences in responses to automated cars and automated trains with less confidence in automated cars than automated trains

# 'Pioneers' marginally more informed about automated cars than 'Followers'

Group Type	London (Viewed)		London (Non-Viewed)	
	Pioneers	Followers	Pioneers	Followers
2.A.1 – To what extent would you consider yourself well informed.....	5.1	4.4	3.5	3.3

## Sources of Information

- National press
- Top Gear
- Personal experience e.g. new BMW driverless parking, Mitsubishi Advent sensor cruise control
- Publicity of Google driverless car

"I've seen the car where it parks it for you and all that; it's brilliant if it parks it for you."

Pioneer

"Just because is it the Telstra car that's around at the moment and someone got killed last week."

Pioneer

"They're testing them already in Sweden, America. I think they're planning on testing them on British roads by 2020 I've read somewhere."

Pioneer

# Less confidence and trust in automated cars vs. trains

Safety is the critical variable that drives the low scores

	London (Viewed)		London (Non-Viewed)	
Group Type	Pioneers	Followers	Pioneers	Followers
2.A.2 – To what extent would you feel confidence in the safety, reliability, security.....	5.0 <b>(7.4)</b>	4.0 <b>(5.9)</b>	4.6 <b>(4.6)</b>	3.8 <b>(7.8)</b>

\* Confidence in train

### Reliability

- Not a concern
- Traffic may be more efficient if all cars were automated

### Security

- Mild concern
- Potential for someone to hack into driverless software
- Likelihood low

### Safety

- Major concern
- Multiple variables

“The 3 combined, it’s slightly awkward. I don’t think there is any reason to think that reliability and security, in fact they’re going to be really good with an automated car because a computer is obviously going to be great for reliability and security and it’s bringing up the safety mark which I would have thought would be a bit lower.”  
Follower

"Immediately when I think about the first thought was panic because I was thinking when you're driving, at least you are in control somehow. For example you know what's going to happen ahead of you in the road."

Follower

"I thought safety came to mind first and safety for trains I thought was feasible and had already been done and safety for cars I wasn't so keen on."

Follower

"I just think it's risky. I can understand with trains because it's on a track but there's so much like....I can understand it on a motorway."

Pioneer

"Yeah I'd say a lot more positive on the trains than cars...because the automated trains, the DLR, touch wood, there's never been any problems with."

Pioneer

"I think train would be an easier transition from driver to driverless than car."

Follower

"No I don't like it at all. I think we're getting big, fat and lazy, this country is. Everyone's walking about on the phones like this."

Pioneer

# Multiple variables associated with cars elevates degree of risk and dislike

13

## Practical, emotional and financial concerns emerge relating to

### Practical

- Ease of use
- Potential for software error
- Mix of auto/non-auto vehicles
- Pedestrians
- Complexity of roads/traffic
- Temporary roadworks/lane closures
- Negotiating bikes/motorbikes

### Emotional

- Risk of collision
- Fear of other driver behaviour
- Can't replicate human instinct
- Technology taking over
- Laziness
- Relinquishing control behind the wheel
- Boring

### Financial

- Cost of vehicles
- Cost of updating software
- Insurance claims

“There’s lots more variables to take into consideration whereas a train runs on a track.”

Follower

“It is already happening but for cars. I just think there’s too many variables for cars.”

Follower

“The boredom of sitting in a 30mph robot.”

Pioneer

“I don’t actually like the idea, I think it could be very dangerous.”

Pioneer

“It’s a silly idea – safety being the factor.”

Pioneer

# Some positives identified which could make automated cars appealing in the future for motorway driving

Allows me to do other things

**Gives me gift of time**

- Sleep
- Read
- Work

Meeting with colleagues

“I put productive on my thing because you can do other things while you're not driving. Not just saying on the phone, but I'm just saying you might be able to do a bit of work”  
Pioneer

Increase safety

**Eliminates human error**

- Bad drivers
- Reduces number of cars
- No speeding
- Operate within law

“If you had 1,000 of them and if they're all one road and they're all obeying the speed limit, that would be a really good thing because what's crazy not only is the amount of traffic, it's the way everyone drives”  
Follower

Increases accessibility

**Enables people to drive**

- Elderly
- Disabled
- Blind

“I put people who might otherwise not be able to drive like elderly or disabled, can get out and about”  
Pioneer

## Ki3

DLR is a strong point of reference for automated trains for London Underground users

# Generally people feel more informed about automated trains vs. automated cars – more direct experience and greater visibility

	London (Viewed)		London (Non-Viewed)	
Group Type	Pioneers	Followers	Pioneers	Followers
2.B.1 – To what extent would you consider yourself well informed about automated trains	5.4 <i>(5.1)</i>	5.0 <i>(4.4)</i>	4.8 <i>(3.5)</i>	5.0 <i>(3.3)</i>

### Sources of Information

- Automated trains are part of the transport system
- Other London trains e.g. DLR, Heathrow, Airport terminals
- International experience e.g. Japan, Berlin, Prague

“Just that I’ve been on one like the DLR. What’s the Heathrow one as well?”  
Pioneer

“I think because I’ve travelled a lot and it’s already in a lot of cities like Tokyo and Dubai, the big major cities so I’ve seen it already so I’m quite comfortable.”  
Pioneer

\* Informed about automated cars

“Yeah it might be Gatwick yeah but they haven’t got drivers either. Yeah just been on them, and they seem to work so efficiently, had no problems. Seems a lot more simpler task to get them all running in sync.”  
Pioneer

# High degree of comfort with the DLR

17

Most understand that DLR are 'driverless' but have a member of staff on board

## Attended automated trains

Starting and stopping are automated but a train attendant operates the doors and drives the train in case of emergencies

## Unattended or "fully" automated trains

Starting and stopping, operation of doors and handling of emergencies are fully automated. No train staff are on board. Mobile and control centre staff respond in case of emergencies

*Attended automated trains (DLR) seen to be efficient, safe and exciting and offer benefits of increased reliability and improved service with reassurance of having a staff member of staff on board – visible presence, sense of authority, uniform*

“Automated trains...its quite normal. The DLR is automated. The DLR has always been driverless.”

Follower

“I think the DLR in Stratford, that's automated; I don't particularly have a problem with it. I think because I always seem to be travelling rush hour so I don't think of it.”

Pioneer

“Every time I've been on the DLR, I've never had an issue. But the safety thing that's always a buffer is you know that it's a guard/driver as well.”

Pioneer

“I think it's already started with DLR but I think apart from the DLR, I think it's happened elsewhere but I don't know .”

Pioneer

“Just because I think the only train that I know that drives itself is the DLR. I don't really know any other one that does, but I don't feel unsafe when I'm on it.”

Follower

# No issues with reliability. Safety becomes less of a concern vs cars but security is more of a concern

Group Type	London (Viewed)		London (Non-Viewed)	
	Pioneers	Followers	Pioneers	Followers
2.B.2 – To what extent would you feel confidence in the safety, reliability and security of an <i>unattended automated train</i>	7.4	5.9	4.6	7.8

### Reliability

- Not a concern
- Unattended automated likely to increase reliability
- Not reliant on ANY staff
- Improve efficiency and timetable

### Security

- Moderate concern
- London Underground is an obvious target
- Not sure whether unattended automated makes this more or less risky

### Safety

- Moderate concern
- Less of a concern that with cars
- One track system
- Immediate response to people falling/jumping under trains

# Respond to unattended automated trains on two levels

20

Negative emotional response initially occurs with fully unattended automated trains

**Primary response**  
is highly emotional  
and cautious

*What if the train breaks down in the tunnel?  
What if there is anti social behaviour on the train?  
What if I'm under threat?  
What if there is a terrorist attack?*

**Concerns:**  
*Fear  
Being abandoned  
Being alone  
Without guidance*

**Secondary response**  
is more logical,  
considered and  
positive

*What do the train drivers do in these cases  
anyway?  
Drivers don't get actually get out of their cabin  
Reassure via intercom  
Radio ahead for help  
Would help evacuate in emergency*

**Benefits:**  
*Safer  
Increased efficiency  
Increased reliability/delays  
They move on tracks  
Not reliant on train staff  
Reduce strikes  
24/7 service  
Modern service/London image  
Airy and spacious*

“We’ve already talked about reduce the amount of accidents which are caused by human error.”

Follower

“More predictable running times because trains are always being delayed; it’s a major problem for everybody”

Follower

“As soon as they get rid of the people driving the trains, it’s better for me; I don’t like being held to ransom to come to work.”

Pioneer

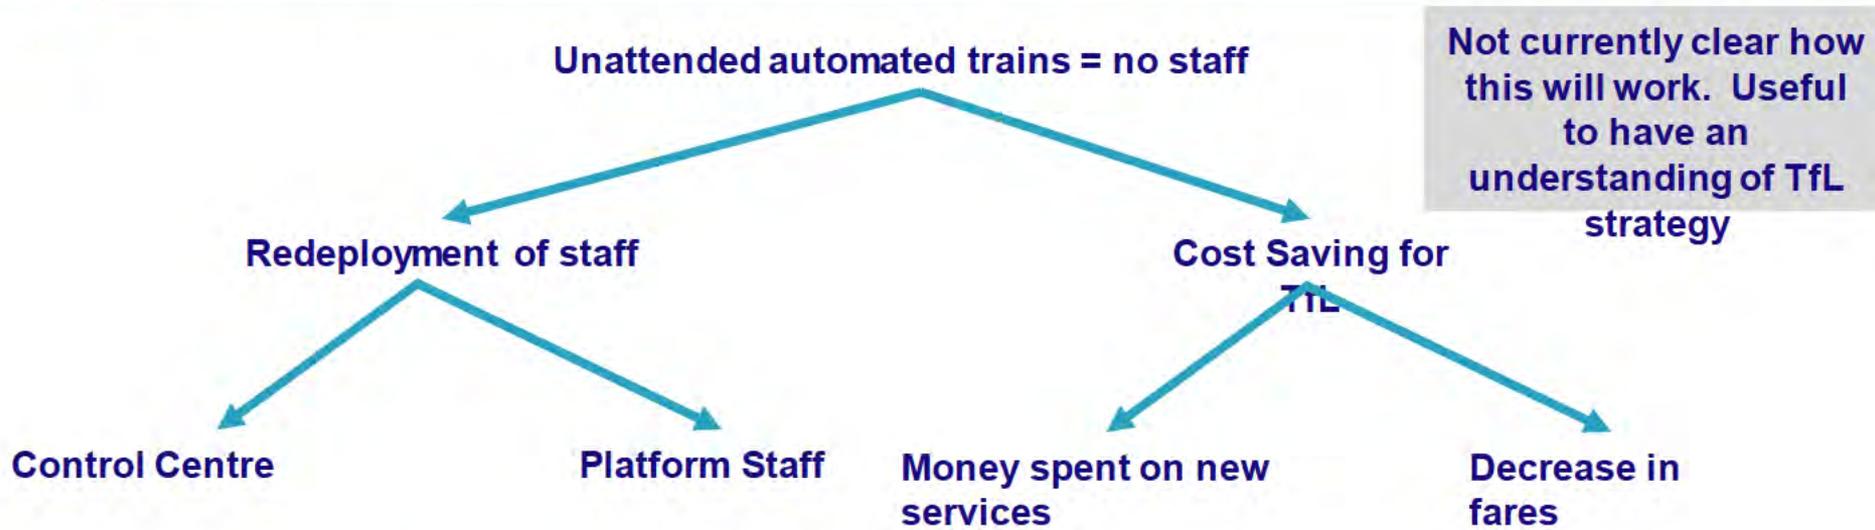

“It makes London more of a modern city – like Japan already has driverless trains”

Pioneer

“I’m different on the trains here (vs Car). I think it’s logical. I actually think it might even be quite practical. There are some, thinking of some of the shocking train disasters of the last couple of decades, they had humans taking care of them and it was actually system failures that caused the accidents”

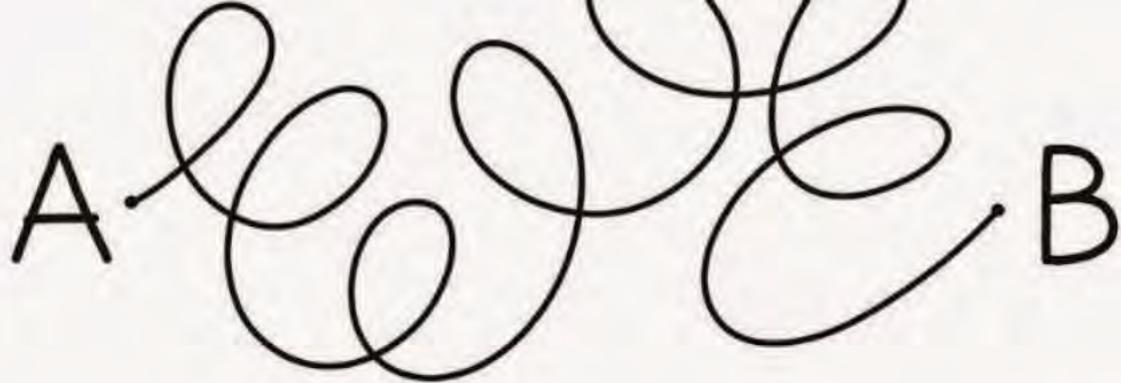

Follower

# Important that benefits are noticed by customers

Not currently clear how this will work. Useful to have an understanding of TfL strategy

"I just think there's more benefits for the train companies rather than the customers. I think it's just where they're not having to pay people, lining their pockets, not passing on the savings to the customers."  
Pioneer

**Ki4**

Focus for users of London Underground is about getting from A-B – they pay limited attention to how that is fulfilled

# Degree of surprise when reveal that some of London Underground trains are already partially automated

Not a concern that parts of the current network are automated

Focus on end benefit vs. operational issues

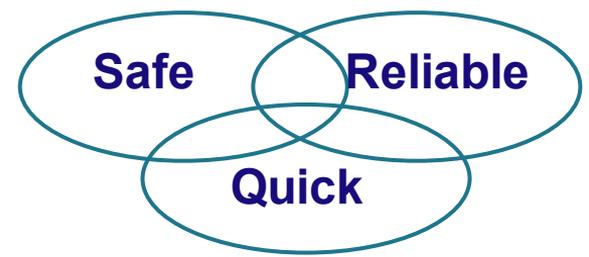

Grade of Automation	Type of train operation	Setting train to motion	Stopping train	Door closure	Operation in event of disturbance
GoA 1	ATP with driver	Driver	Driver	Driver	Driver
GoA 2	ATP and ATC with driver	Automatic	Automatic	Driver	Driver
GoA 3	Driverless	Automatic	Automatic	Train operator	Train operator
GoA 4	UTO	Automatic	Automatic	Automatic	Automatic

Deep Tube Lines 2006

GoA1	GoA2	GoA3	GoA4
Greenwich			
Victoria & City	Victoria		
Piccadilly	Circle		
	Northern		

Deep Tube Lines 2015

GoA1	GoA2	GoA3	GoA4
	Elizabeth		
	Victoria		Piccadilly
	Circle		Victoria & City
	Northern		

If fully automated services can fulfil that then limited barriers exist

“Actually I’m rushing to work so I’m not really thinking no-one is driving that train.  
Pioneer

“I just felt like in our day to day lives catching the Tube, we don’t ever think about whether there’s a driver on the train.”  
Pioneer

**Ki5**

Even most confident feel more comfortable on an automated sub surface vs. automated tube train

# Recognise difference in size of trains that currently operate on London Underground

Language of 'deep tube' reinforces sense on discomfort as it reinforces how far you are underground

*Generally less comfortable*  
*Loss of senses e.g. can't see*  
*Harder to evacuate*  
*No air*

There are two different sizes trains on London Underground

The larger trains operate on what are called the 'Sub-Surface' lines- the Metropolitan, District, Circle and Hammersmith and City lines. These trains go above ground and through wide tunnels which are close to the surface

The smaller trains operate on what are called the 'Deep Tube' lines- the Bakerloo, Central, Victoria, Waterloo and City, Jubilee, Northern and Piccadilly lines. These trains go above ground and through small, 'tube' tunnels which are deeper than on the sub-surface lines

*Greater sense of comfort associated with sub-surface trains*  
*Less claustrophobic*  
*Visual reassurance*  
*Easier to evacuate*  
*Fresh air*

"If something goes wrong and you can see the fields and the streets outside...if you fancied your chances you'd think, well, I can get out of this. But if you're completely underground - no, seriously you're..."

Pioneer

"It's the deep tunnels and all of that, it's the dirtiness and dark, dinginess of it all that is the weird bit about it."

Follower

*Many recognise that comments are fear based and irrational – worth thinking about the language used*

# Confidence in travelling on unattended automated tube trains feels high

	London (Viewed)		London (Non-Viewed)	
Group Type	Pioneers	Followers	Pioneers	Followers
2.D.1 – Confidence in travelling on unattended automated tube train	8.1	7.4	5.9	8.1

“Breakdown on the train. What happens if people jump under the tracks? All these scenarios haven't been thought about, couldn't have been thought about by them, because the software is not going to get out of the train and get the body off the track”

Pioneer

- Diverse group
- Range of scores 3-9
- General concerns over 'tube trains' e.g. air conditioning, antisocial behaviour
- Worried about the dark
- Worried about breakdown
- Limited reassurance in emergency situations

*Phased introduction of unattended automated on sub-surface network first would be preferred*

# Concerns and mitigation (1)

29

	Customer Concern	Specific mitigation proposed	Considerations
1	<p>The train stops while in the tunnel and its dark</p> <p><i>“Being trapped in a tunnel without a driver on board- I feel a sense of panic, isolation and not knowing how to get out of the train to a place of safety”</i></p>	<p>Human contact from the control room to immediately reassure</p> <p>Ensure full wifi so customer can get real time information</p> <p>Help button</p> <p>Visual reassurance outside the train (lights, pictures)</p> <p>Visual reference inside the carriage that shows distance to next station</p>	<p>High risk of this happening on everyday journeys</p> <p>Impact low for short delays</p> <p>Language doesn't have to be as extreme as 'being trapped'</p> <p>Emotive language like panic and isolation is unnecessary</p> <p>People feel anxious as soon as the train stops</p>
2	<p>Somebody could hack the software and there could be a terrorist attack</p> <p>Rogue controllers</p> <p><i>“Fear that the technology could be compromised by hacking or some other cyber-security attack- resulting in deaths or injuries”</i></p>	<p>Confidence in technology</p> <p>Closed system</p> <p>Explain that this operates in other countries and never been hacked</p>	<p>Security threats are top of mind</p> <p>Recognise that the tube is a target regardless</p> <p>Low risk but high impact</p> <p>Don't need 'death or injuries' – people know the impact of a terrorist attack</p> <p>They don't want TfL to publish safety and security operations</p> <p>They are not just looking for Norton anti virus reassurance!</p>

# Concerns and mitigation (2)

30

	Customer Concern	Specific mitigation proposed	Considerations
3	<p>Something getting stuck in the doors e.g. bag or coat</p> <p><i>“Being dragged along the platform or under the automated train because there is no driver to check it is safe before closing the doors and departing from the station”</i></p>	<p>Platform Edge Doors e.g. Jubilee line</p> <p>Sensor on the doors</p> <p>No gap between doors and platform</p> <p>Staff on the platform</p>	<p>Real everyday threat during rush hour</p> <p>Platforms are crowded</p> <p>Concerns about impact on reliability / efficiency of sensor doors</p> <p>Not sure what ‘Gap Fillers’ are</p> <p>Need to give examples e.g. like Jubilee line</p>
4	<p>Passengers display anti social or threatening behaviour e.g. drinking, rowdy</p> <p><i>“Not being able to call someone for help in the event of being attacked or being subject to some other type of crime”</i></p>	<p>‘Eyes on the train’</p> <p>CCTV</p> <p>Help button</p> <p>Signs on the train to explain BTP will be called immediately</p> <p>Control centre to make an announcement to demonstrate these people can be seen</p>	<p>High risk of this occurring</p> <p>Definitely needs some process for BTP to be contacted</p> <p>Most recognise that this is unrelated to automation and can happen now without driver intervention</p>

# Concerns and mitigation (3)

31

	Customer Concern	Specific mitigation proposed	Considerations
5	The software breaks down and all the trains stop or get diverted somewhere else	<ul style="list-style-type: none"> <li>Back up technology</li> <li>Contingency plans</li> <li>Regulate crowding</li> <li>Stops people coming on to platforms</li> </ul>	Need some degree of frequency or explanation that this is low risk
6	<p>Broken wheel/broken screen</p> <p><i>“What happens if something unexpected happens like a broken rail- I don’t think the system would account for this and the train would crash”</i></p>	<ul style="list-style-type: none"> <li>Obstacle detection technology</li> <li>Possible introduction of deep machine learning algorithms of the type used in driverless cars</li> </ul>	<p>Perceived low risk of this happening</p> <p>What would happen now?</p> <p>How can driver avoid?</p>
7	<i>“I suffer from claustrophobia and not having any staff on the train would make me feel worse- I think I would panic if the train stopped, and the dark enclosed space of the tunnel just makes things worse when it gets hot and its too crowded”</i>	<ul style="list-style-type: none"> <li>Visual and audio announcements – next station is...</li> <li>Open gangway train (which feels more spacious)</li> <li>Air cooling</li> </ul>	<p>Too general vs. specific concern</p> <p>Lack of tolerance of claustrophobia</p> <p>Doesn’t add anything by mentioning this specifically</p>

**Ki7**

Provision of relevant and 'evidence based' information increases acceptability of unattended automated tube trains

# Shift in confidence after exposure to information about safety, security, reliability

<i>Group Type</i>	<b>London (Viewed)</b>		<b>London (Non-Viewed)</b>	
	<i>Pioneers</i>	<i>Followers</i>	<i>Pioneers</i>	<i>Followers</i>
<b>2.D.1 – Confidence in travelling on unattended automated tube train</b>	8.1	7.4	5.9	8.1
<b>5.A.1 – Confidence in travelling on unattended automated tube train</b>	8.5	8.4	8.5	8.1

*Impact of group affect on change in attitude towards safety is an additional consideration*

# Strongest shifts relate to direct evidence from proven examples where unattended automated tube trains work

34

## Other countries

Europe	North America	Asia
Lyon	New York	Singapore
Paris	Detroit	Hong Kong
Barcelona	Vancouver	Dubai
Copenhagen	Las Vegas	Kuala Lumpur
Torino	Miami	Taipei
Lille	Jacksonville	Osaka
Tokyo	Rome	
Rennes		Nagoya
Lausanne		Yokohama
		Tokyo

- **Information increases confidence levels**
- Examples are busy, aspirational cities
- Known for efficiency
- No negative reports
- No poor PR

## Glasgow 2021

- **Information increases acceptance levels**
- Glasgow is well known city
- Some rivalry with London – London should be leading
- Safety measures must have been explored

## Projected forecasts

**SAFETY** - "Based on current projections the number of equivalent fatalities per year will be about a tenth compared to what they are now."

**RELIABILITY** - "For the Central Line, forecasts for unattended automated tube trains result in about a tenth of the delays compared to now"

**SECURITY** - "There is no projected change in security with unattended automated tube trains compared to the current situation on London Underground"

- **Limited impact on confidence levels**
- Lack of credibility of TfL projections
- What are the figures based on?
- If taken from other countries then helpful

## Role of Automation

Automation has changed the following:

- Lift attendants – no longer required to operate lifts
- Train guards – because of the development of in-cab CCTV cameras that can see the whole length of the platform
- Bus conductors – because improved payment technology has made fare evasion more difficult

- **Limited impact on confidence levels**
- Focuses people on loss of jobs argument

*Overall sense that automated trains could work in London in the future providing specific concerns are mitigated and sufficient information; much more sceptical about automated cars in congested London roads*

Next steps

# Reminder of Key Insights

36

- 1 Automated vehicles are becoming more mainstream; definitely seen as part of the short term future for road and rail
- 2 Distinct difference in response to automated cars and automated trains with less confidence in automated cars than automated trains
- 3 DLR is a strong point of reference for automated trains for London Underground users
- 4 Focus for users of London Underground is about getting from A-B safely, quickly and reliably – they pay limited attention to how that is fulfilled
- 5 Even the most confident feel more comfortable on an automated sub surface vs. automated tube train
- 6 Biggest concerns relate to lack of human presence – virtual voice/reassurance can overcome fears
- 7 Provision of relevant and evidence based information increases acceptability of unattended automated tube trains

# Next Steps
