<b>Location Plan</b>	
	
<b>ANPR Terminology</b>	
<p>ANPR sites are either assumed to be 'External' or 'Internal'. This affects the way in which the OD matching process works in relation to each site. The differences between the two types are as follows:</p>	
<p>External (shown in blue coloured tabs) - these are sites which are assumed to be on the periphery of the study area and hence vehicles passing through these sites will be starting or ending their trip. Directions at these sites are set to Inbound and Outbound, and for sites that have vehicles travelling into the study area (i.e. they are not purely a one-way Outbound site) a ANPR Inbound Match Rate statistic is presented in addition to the capture rates for each direction.</p>	
<p>Internal (shown in pink coloured tabs) - these are sites that are considered to be possible through movement sites for longer distance OD movements - i.e. they may be an intermediate capture point for vehicles seen entering and exiting the study area elsewhere. In this instance, the OD movement is assigned to the initial and final capture locations. Internal sites can be the origin of a trip (if it is not captured elsewhere before) or the destination of a trip (if it is not captured again after). However, as the majority of vehicles passing these locations will have both the origin and destination assigned elsewhere, match rates are not presented for these points. Directions at these sites will be given as N and S (effectively meaning NB and SB), for example, as opposed to Inbound and Outbound.</p>	
<p>Match rates will often be lower than capture rates at External sites; there are three key reasons for this. Firstly for a vehicle to be successfully matched it has to be captured at both the inbound site and also a subsequent site (either internal or outbound at an external site). Therefore, depending on the capture rate success at the subsequent site, the probability of being captured at both sites may be lower. Secondly, any trips that either start or end their trips within the study area may only be captured once, either entering or exiting the cordon, and hence it will not be matched against a previous/subsequent capture. Finally, study areas that are not fully covered on each entry/exit into the cordon will allow vehicles to enter or leave the study area without being captured and will again result in unmatched trips.</p>	
<p><b>Additional Notes</b> (Factors which may impact on survey results such as accidents, roadworks, special events)</p>	
Empty space for additional notes

4	2087	2025	97%	374	363	97%	1713	1662	97%	374	67	18%
<b>Total</b>	<b>13942</b>	<b>13683</b>	<b>98%</b>	<b>7216</b>	<b>7083</b>	<b>98%</b>	<b>6726</b>	<b>6600</b>	<b>98%</b>	<b>7216</b>	<b>2268</b>	<b>31%</b>

	External Site
	Internal Site

\*Inbound match rates are only shown for the external sites that have traffic inbound to the study area  
 \*For internal sites, the MCC and capture data will relate to EB and WB or NB and SB as opposed to Inbound and Outbound
